Delta Elevator Drive
VFD-ED **Series User Manual**

www.deltaww.com

Smarter. Greener. Together.

Thank you for choosing DELTA's high-performance VFD-ED Series. The VFD-ED Series is manufactured with high-quality components and materials and incorporates the latest microprocessor technology available.

This manual is to be used for the installation, parameter setting, troubleshooting, and daily maintenance of the AC motor drive. To guarantee safe operation of the equipment, read the following safety guidelines before connecting power to the AC motor drive. Keep this operating manual at hand and distribute to all users for reference.

To ensure the safety of operators and equipment, only qualified personnel familiar with AC motor drive are to do installation, start-up and maintenance. Always read this manual thoroughly before using VFD-ED series AC Motor Drive, especially the WARNING, DANGER and CAUTION notes. Failure to comply may result in personal injury and equipment damage. If you have any question, please contact your dealer.

PLEASE READ PRIOR TO INSTALLATION FOR SAFETY.

DANGER!

1. AC input power must be disconnected before any wiring to the AC motor drive is made.
2. A charge may still remain in the DC-link capacitors with hazardous voltages, even if the power has been turned off. To prevent personal injury, please ensure that power has turned off before opening the AC motor drive and wait ten minutes for the capacitors to discharge to safe voltage levels.
3. Never reassemble internal components or wiring.
4. The AC motor drive may be destroyed beyond repair if incorrect cables are connected to the input/output terminals. Never connect the AC motor drive output terminals U/T1, V/T2, and W/T3 directly to the AC mains circuit power supply.
5. Ground the VFD-ED using the ground terminal. The grounding method must comply with the laws of the country where the AC motor drive is to be installed. Refer to the Basic Wiring Diagram.
6. VFD-ED series is used only to control variable speed of 3-phase induction motors, NOT for 1-phase motors or other purpose.
7. VFD-ED series shall NOT be used for life support equipment or any life safety situation.

WARNING!

1. DO NOT use Hi-pot test for internal components. The semi-conductor used in AC motor drive easily damage by high-voltage.
2. There are highly sensitive MOS components on the printed circuit boards. These components are especially sensitive to static electricity. To prevent damage to these components, do not touch these components or the circuit boards with metal objects or your bare hands.
3. Only qualified persons are allowed to install, wire and maintain AC motor drives.

CAUTION!

1. Some parameters settings can cause the motor to run immediately after applying power.
2. DO NOT install the AC motor drive in a place subjected to high temperature, direct sunlight, high humidity, excessive vibration, corrosive gases or liquids, or airborne dust or metallic particles.
3. Only use AC motor drives within specification. Failure to comply may result in fire, explosion or electric shock.
4. To prevent personal injury, please keep children and unqualified people away from the equipment.
5. When the motor cable between AC motor drive and motor is too long, the layer insulation of the motor may be damaged. Please use a frequency inverter duty motor or add an AC output reactor to prevent damage to the motor. Refer to appendix B Reactor for details.
6. The rated voltage for AC motor drive must be ≤ 240V (≤ 480V for 460V models) and the mains supply current capacity must be ≤ 5000A RMS (≤10000A RMS for the ≥ 40hp (30kW) models)

Firmware version: 1.01

Chapter 1 Introduction

1-1 Receiving and Inspection

After receiving the AC motor drive, please check for the following:

1）Inspect the unit after unpacking to assure it was not damaged during shipment. Make sure that the part number printed on the package corresponds with the part number indicated on the nameplate.

2）Make sure that the voltage for the wiring lie within the range as indicated on the nameplate. Install the AC motor drive according to this manual.

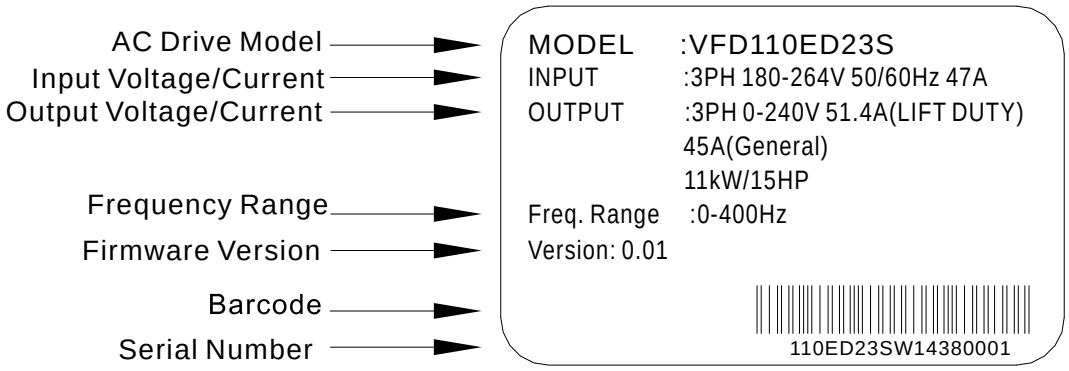
3）Before applying the power, make sure that all the devices, including power, motor, control board and digital keypad, are connected correctly.

4）When wiring the AC motor drive, make sure that the wiring of input terminals “R/L1, S/L2, T/L3” and output terminals”U/T1, V/T2, W/T3” are correct to prevent drive damage.

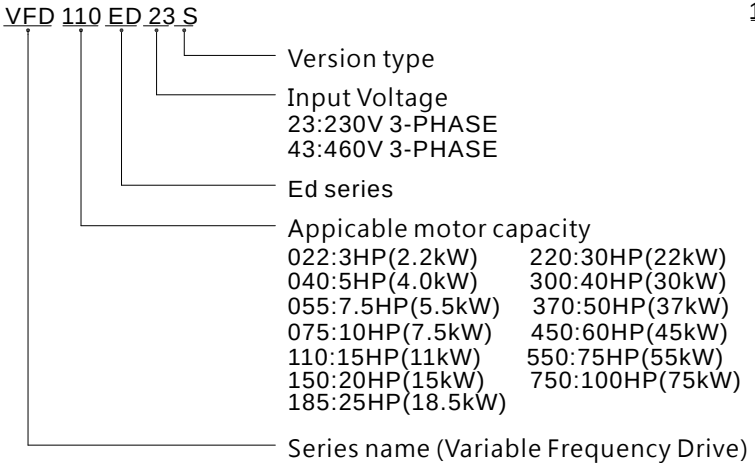
5）When power is applied, select the language and set parameter groups via the digital keypad (KPED-LE01). When executing a trial run, begin with a low speed and then gradually increase the speed untill the desired speed is reached.

1-2 Nameplate Information

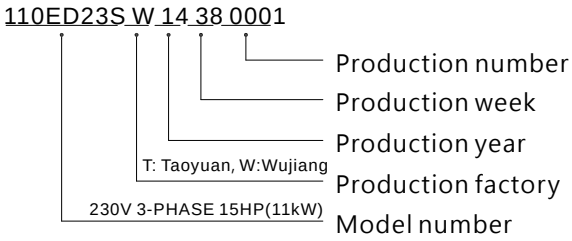
Using 15HP/11kW 230V, 3-Phase as an exemple.



1-3 Model Name



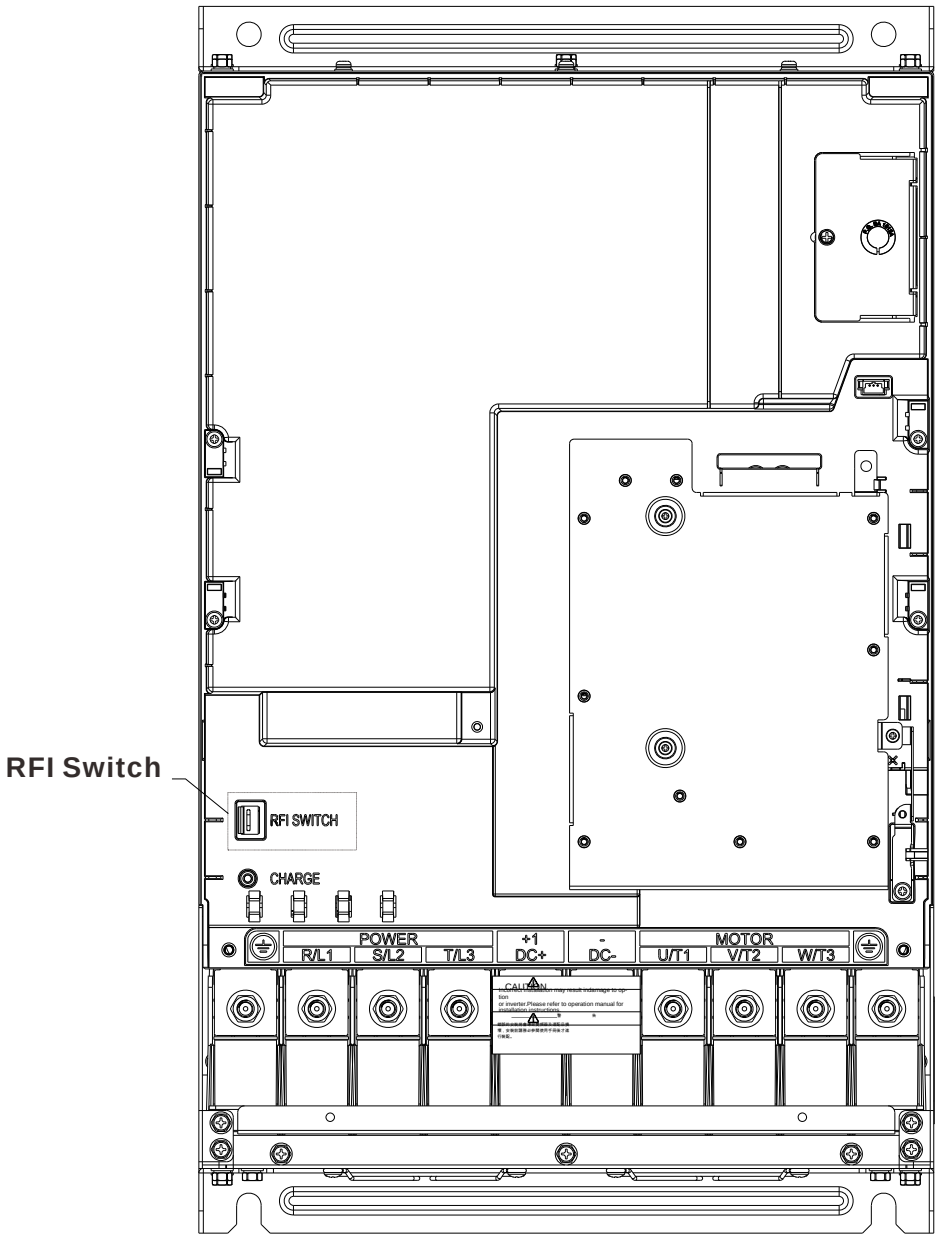
1-4 Serial Number



1-5 RFI Switch

The AC motor drive may emit the electrical noise. The RFI switch is used to suppress the interference (Radio Frequency Interference) on the power line. The RFI Switch of Frame C, D, E are at similar position (Frame B doesn't have a RFI Switch). Open the top cover to remove the RFI switch as shown in the imge below.

Frame E

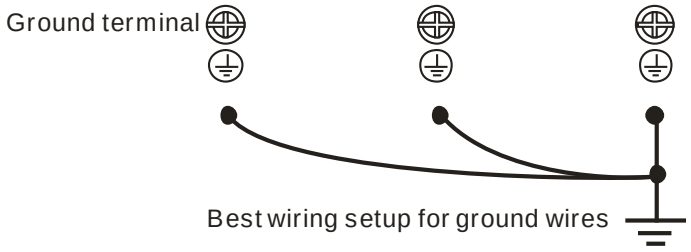


Isolating main power from ground:

When the power distribution system of the Power Regenerative Unit is a floating ground system (IT) or an asymmetric ground system (TN), the RFI short-circuit cable must be cut off. Cutting off the short-circuit cable also cuts off the internal RFI capacitor (filter capacitor) between the system's frame and the central circuits to avoid damaging the central circuits and (according to IEC 61800-3) reduce the ground leakage current.

Important points regarding ground connection

- ☑ To ensure the safety of personnel, proper operation, and to reduce electromagnetic radiation, the Power Regenerative Unit must be properly grounded during installation.
- ☑ The diameter of the cables must meet the size specified by safety regulations.
- ☑ The shielded cable must be connected to the ground of the Power Regenerative Unit to meet safety regulations.
- ☑ The shielded cable can only be used as the ground for equipment when the aforementioned points are met.
- ☑ When installing multiple sets of Power Regenerative Units, do not connect the grounds of the Power Regenerative Units in series. As shown below



Pay particular attention to the following points:

- ☑ After turning on the main power, do not cut the RFI short-circuit cable while the power is on.
- ☑ Make sure the main power is turned off before cutting the RFI short-circuit cable.
- ☑ Cutting the RFI short-circuit cable will also cut off the conductivity of the capacitor. Gap discharge may occur once the transient voltage exceeds 1000V.

If the RFI short-circuit cable is cut, there will no longer be reliable electrical isolation. In other words, all controlled input and outputs can only be seen as low-voltage terminals with basic electrical isolation. Also, when the internal RFI capacitor is cut off, the Power Regenerative Unit will no longer be electromagnetic compatible.

- ☑ The RFI short-circuit cable may not be cut off if the main power is a grounded power system.
- ☑ The RFI short-circuit cable may not be cut off while conducting high voltage tests. When conducting a high voltage test to the entire facility, the main power and the motor must be disconnected if leakage current is too high.

Floating Ground System(IT Systems)

A floating ground system is also called IT system, ungrounded system, or high impedance/resistance (greater than 30Ω) grounding system.

- ☑ Disconnect the ground cable from the internal EMC filter.
- ☑ In situations where EMC is required, check whether there is excess electromagnetic radiation affecting nearby low-voltage circuits. In some situations, the adapter and cable naturally provide enough suppression. If in doubt, install an extra electrostatic shielded cable on the power supply side between the main circuit and the control terminals to increase security.
- ☑ Do not install an external RFI/EMC filter, the EMC filter will pass through a filter capacitor, thus connecting power input to ground. This is very dangerous and can easily damage the Power Regenerative Unit.

Asymmetric Ground System (Corner Grounded TN Systems)

Caution: Do not cut the RFI short-circuit cable while the input terminal of the Power Regenerative Unit carries power.

In the following four situations, the RFI short-circuit cable must be cut off. This is to prevent the system from grounding through the RFI capacitor, damaging the Power Regenerative Unit.

<table>
<tr><th colspan="2">RFI short-circuit cable must be cut off</th></tr>
<tr><td>1. Grounding at a corner in a triangle configuration
 </td><td>2. Grounding at a midpoint in a polygonal configuration
 </td></tr>
<tr><td>3. Grounding at one end in a single-phase configuration
 </td><td>4. No stable neutral grounding in a three-phase autotransformer configuration
 </td></tr>
</table>

Use RFI short-circuit
Internal grounding through RFI capacitor, which reduces electromagnetic radiation. In a situation with higher requirements for electromagnetic compatibility, and using a symmetrical grounding power system, an EMC filter can be installed. For example, the diagram on the right is a symmetrical grounding power system. 
1-6 Dimensions

Frame B

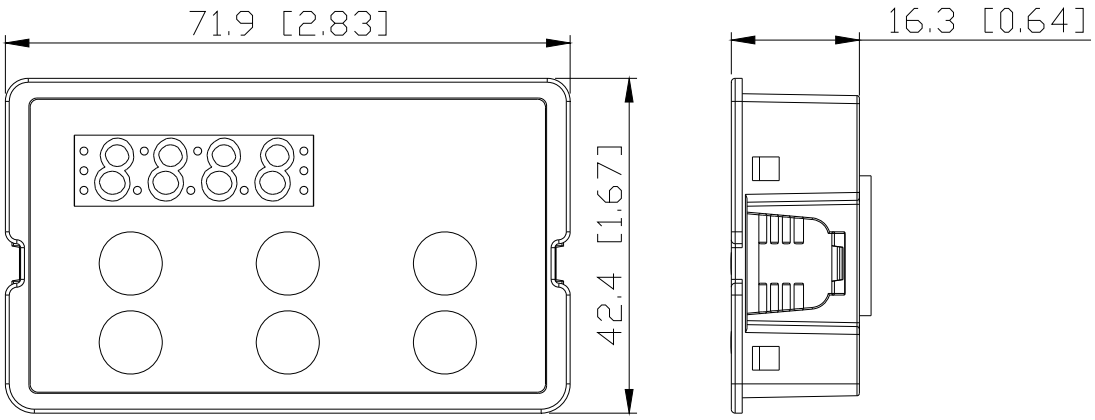
KPED-LE01



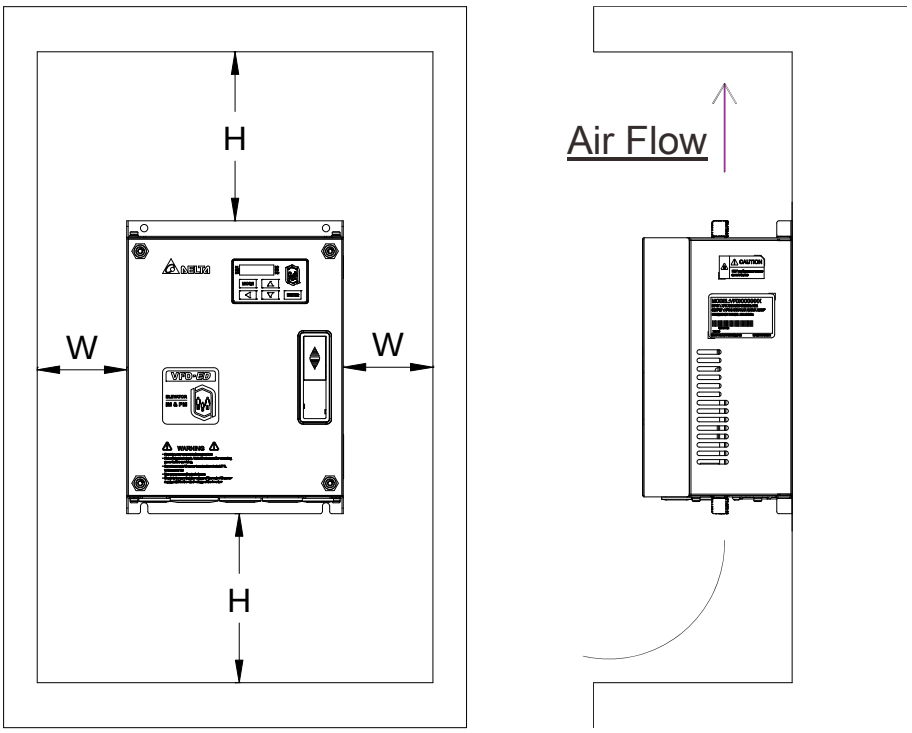
Chapter 2 Installation

2-1 Minimum Mounting Clearance and Installation

NOTE

- ☑ Prevent fiber particles, scraps of paper, shredded wood saw dust, metal particles, etc. from adhereing to the heat sink
- ☑ Install the AC motor drive in a metal cabinet. When installing one drive below another one, use a metal separation between the AC motor drives to prevent mutual heating and to prevent the risk of fire accident.
- ☑ Install the AC motor drive in Pollution Degree 2 environments only: normallyl only nonconductive pollution occurs and temporary conductivity caused by condensation is expected.

The image below is for reference only.



2-2 Minimum mounting clearance

Horsepower	Width mm (inch)	Height mm (inch)
3-5HP	50 (2)	150 (6)
7.5-20HP	75 (3)	175 (7)
25-30HP	75 (3)	200 (8)

Frame	Capacity	Model No.
B	3.0-5.0HP (2.2-4kW)	VFD022ED21S, VFD037ED21S,VFD040ED23S/43S
C	7.5-15HP (5.5-11kW)	VFD055ED23S/43S, VFD075ED23S/43S,VFD110ED23S/43S, VFD150ED43S, VFD185ED43S
D	20-40HP (15-30kW)	VFD150ED23S, VFD185ED23S, VFD220ED23S/43S VFD300ED43S
E	40-100HP (30-75kW)	VFD300ED23S, VFD370ED23S/43S, VFD450ED43S, VFD550ED43S, VFD750ED43S

NOTE

The minimum mounting clearances stated in the table above applies to AC motor drives frame B,C,D and E. A drive which fails to follow the minimum mounting clearances may cause the fan to malfunction and heat dissipation problem.

Chapter 3 Wiring

After removing the front cover, examine if the power and control terminals are clearly noted. Read following precautions before wiring.

☑ Make sure that power is only applied to the R/L1, S/L2, T/L3 terminals. Failure to comply may result in damage to the equipments. The voltage and current should lie within the range as indicated on the nameplate (Chapter 1-1).

☑ All the units must be grounded directly to a common ground terminal to prevent lightning strike or electric shock.

☑ Make sure to fasten the screw of the main circuit terminals to prevent sparks which is made by the loose screws due to vibration

 **DANGER**	☑ It is crucial to turn off the AC motor drive power before any wiring installation are made. A charge may still remain in the DC bus capacitors with hazardous voltages even if the power has been turned off therefore it is suggested for users to measure the remaining voltage before wiring. For your personnel saftery, please do not perform any wiring before the voltage drops to a safe level < 25 Vdc. Wiring installation with remaninig voltage condition may caus sparks and short circuit. ☑ Only qualified personnel familiar with AC motor drives is allowed to perform installation, wiring and commissioning. Make sure the power is turned off before wiring to prevent electric shock.
 **CAUTION**	☑ When wiring, please choose the wires with specification that complys with local regulation for your personnel safety. ☑ Check following items after finishing the wiring: 1. Are all connections correct? 2. Any loosen wires? 1. Any short-circuits between the terminals or to ground?

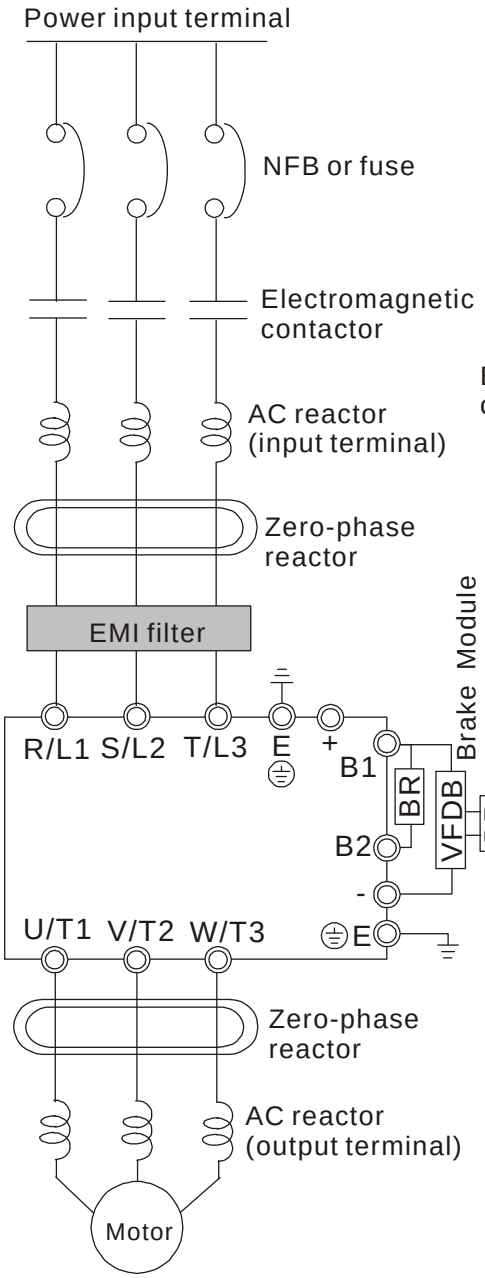
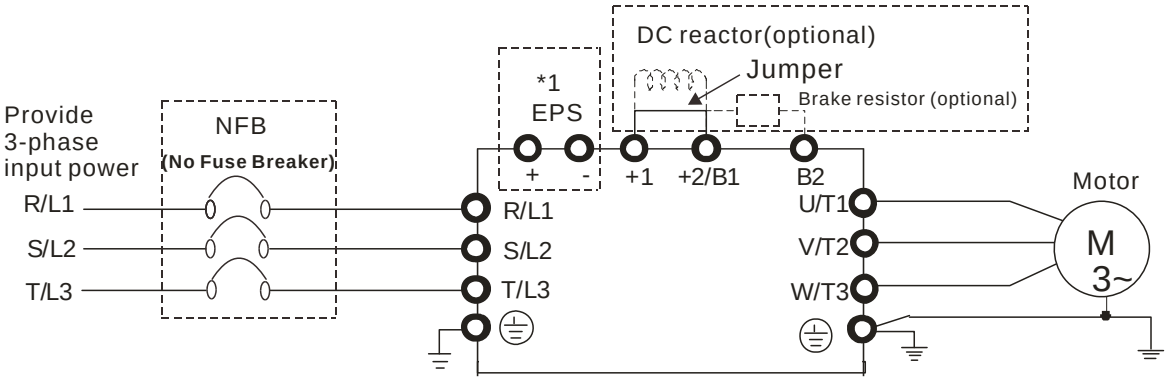
3-2 System Wiring Diagram



Power input terminal	Supply power according to the rated power specifications indicated in the manual (refer to Ch08 Specifications Table).
NFB or fuse	There may be a large inrush current during power on. Refer to Ch06 NFB to select a suitable NFB or fuse.
Electromagnetic contactor	Switching ON/OFF the primary side of the electromagnetic contactor can turn the integrated elevator device ON/OFF, but frequent switching is a cause of machine failure. Do not switch ON/OFF more than once an hour. Do not use the electromagnetic contactor as the power switch for the integrated elevator drive; doing so will shorten the life of the integrated elevator drive.
AC reactor (input terminal)	When the main power supply capacity is greater than 1000kVA, or when it switches into the phase capacitor, the instantaneous peak voltage and current generated will destroy the internal circuit of the integrated elevator drive. It is recommended to install an input side AC reactor in the integrated elevator drive. This will also improve the power factor and reduce power harmonics. The wiring distance should be within 10m. Refer to Ch06
Zero-phase reactor	Used to reduce radiated interference, especially in environments with audio devices, and reduce input and output side interference. The effective range is AM band to 10MHz. Refer to Ch06.
EMI filter	Can be used to reduce electromagnetic interference.
Brake resistor	Used to shorten deceleration time of the motor. Refer to Ch06.
AC reactor (output terminal)	The wiring length of the motor will affect the size of the reflected wave on the motor end. It is recommended to install an AC reactor when the motor wiring length is greater than 20 meters. Refer to Ch06.

Chapter 4 Main Circuit Terminal

5-1 Main Circuit Diagram



Terminal Symbol	Explanation of Terminal Function
EPS（+，-）	Backup power/ Emergency power connection terminal.
R/L1, S/L2, T/L3	AC line input terminals 3-phase.
U/T1, V/T2, W/T3	AC drive output terminals for connecting 3-phase induction motor.
+1, +2/B1	Connections for DC reactor to improve the power factor. Remove the jumper before installing a DC reactor. (Frame E has a DC reactor built-in.).
+2/B1, B2	Connections for brake resistor (optional).
⏚ E	Earth connection, to comply with local regulations.

CAUTION

Main input power terminals:

- ☑ Do not connect 3-phase model to one-phase power. R/L1, S/L2 and T/L3 has no phase-sequence requirement, it can be used upon random selection.
- ☑ A NFB must be installed between the 3-phase power input terminals and the main circuit terminals (R/L1, S/L2, T/L3). It is recommended to add a magnetic contactor (MC) to the power input wiring to cut off power quickly and reduce malfunction when activating the protection function of the AC motor drive. Both ends of the MC should have an R-C surge absorber.
- ☑ Fasten the screws in the main circuit terminal to prevent sparks condition made by the loose screws due to vibration.
- ☑ Use voltage and current within the specification in Chapter 8.
- ☑ When using a general GFCI (Ground Fault Circuit Interrupter), select a current sensor with sensitivity of 200mA or above and not less than 0.1-second operation time to avoid nuisance tripping. When choosing a GFCI designed for the AC motor drive, choose a current sensor with sensitivity of 30mA or above.
- ☑ Use the shield wire or tube for the power wiring and ground the two ends of the shield wire or tube.

☑ Do NOT run/stop AC motor drives by turning the power ON/OFF. Run/stop AC motor drives by sending RUN/STOP command via control terminals or keypad. If you still need to run/stop AC motor drives by turning power ON/OFF, it is recommended to do so only ONCE per hour

Output terminals of the main circuit:

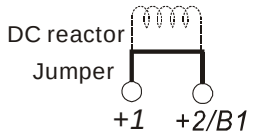
☑ When it is necessary to install a filter at the output side of terminals U/T1, V/T2, W/T3 on the AC motor drive. Use inductance filter. Do not use phase-compensation capacitors or L-C (Inductance-Capacitance) or R-C (Resistance-Capacitance).

☑ DO NOT connect phase-compensation capacitors or surge absorbers at the output terminals of AC motor drives.

☑ Use well-insulated motors to prevent any electric leakage from motors.

Terminals [+1, +2] for connecting DC reactor. Terminals [+1, +2/B1] for connecting brake resistor.

☑ These terminals are to connect to a DC reactor to improve the power factor and reduce harmonics. At the factory setting, a jumper is connected to these terminals.. Remove that jumper before connecting to a DC reactor.



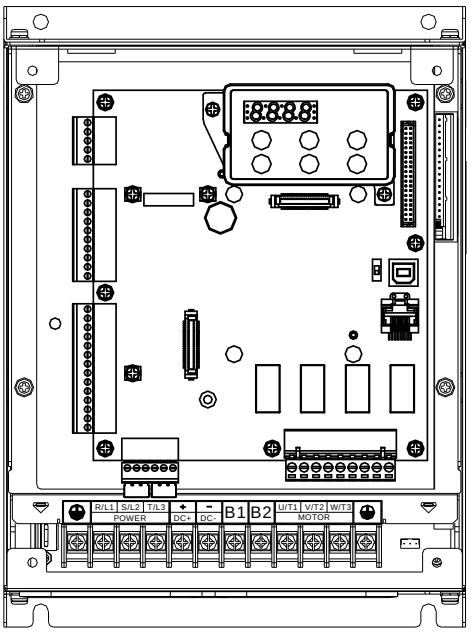
☑ Models above 22kW don't have a built-in brake resistor. To improve resistance ability, connect an external, optional brake resistor

☑ When not in use, leave terminals +2/B1, (－) open.

☑ Short-circuiting [B2] or [－] to [+2/B1] will damage the motor drive. Do NOT do that.

4-1 Main Circuit Terminals Specifications

FrameB



Main circuit terminals:

R/L1,S/L2,T/L3,U/T1,V/T2/,WT3,+(DC+),-(DC-),B1 ,B2,

Models	Wire Gauge		Screw Size & Torque (? 0%)
	Max. Wire Gauge	Min. Wire Gauge	
VFD022ED21S	10AWG [5.3mm2]	14AWG [2.1mm2]	M4 18 kgf-cm (15.6 lbf-in) (1.7 Nm)
VFD040ED43S			
VFD037ED21S		12AWG [3.3mm2]	
VFD040ED23S			

UL installations must use 600V, 75? wire. Use copper wire only.

NOTE:

05 Control Terminals

Remove the top cover before wiring the multi-function input and output terminals

The motor drives' fiugres shown below are for reference only, the real motor drives may look different.

Remove the cover before wiring

Frame B, C & D:

<table>
<tr><td>Step1</td><td>Step 2</td></tr>
<tr><td>Loosen the 4screws.
Then remove the top cover.
  </td><td>  </td></tr>
<tr><td colspan="2">Step 3</td></tr>
<tr><td colspan="2">Put back the top cover.
Then fasten the 4 screws,
Screw torque 15kgf-cm
  </td></tr>
</table>

Frame E

Step 1	Step 2
Loosen the 2 screws, Then follow the direction of the arrow to remove the top cover 	Motor drive w/o the top cover. Step 3	
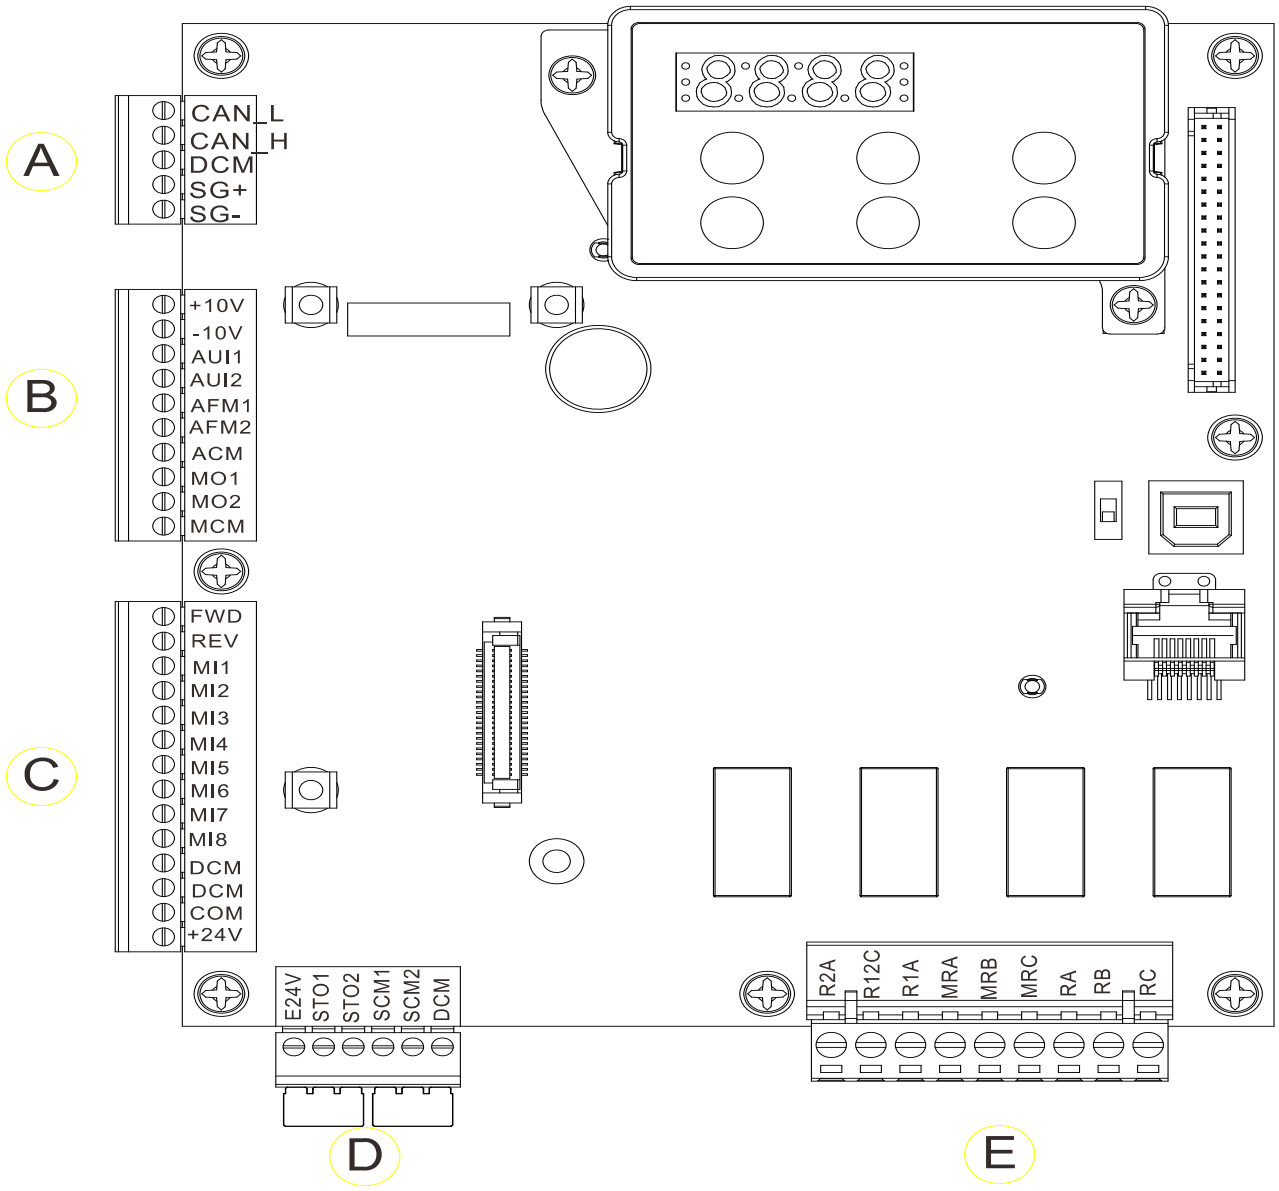
Put back the top cover. Then fasten the 2 screws. Screw torque:15kgf-cm 	

Specifications of the Control Terminal



Control Circuit Terminal Sockets:

Terminal sockets A, B, C

Torque force: 2kg-cm [1.7lb-in.] (0.20Nm)

Wire gauge: 28~14AWG[0.08~2.07mm²]

Terminal socket D:

Torque force: 2kg-cm [1.7lb-in.] (0.20Nm)

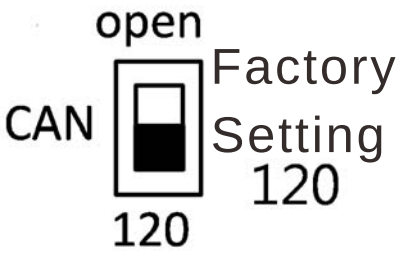
Terminal socket E:

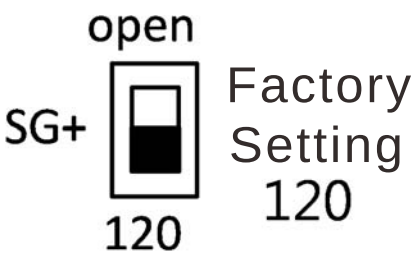
Torque force: 5.2kg-cm [4.5lb-in.] (0.51Nm)

Wire gauge: 28~12AWG[0.08~3.33mm²]

To comply with UL standards, copper wires which are able to sustain 600V, 75ºC environment must be used in the installation.

Control Board Switch





Terminals	Terminal Function	Factory Setting (NPN mode)
+24V/E24V	Digital control signal common terminal (Source)	+24V±5% 200mA
COM	Digital control signal common terminal (Sink)	Common terminal of multi-function input terminals
FWD	Forward-Stop command	FWD-DCM: ON= forward running OFF= deceleration to stop
REV	Reverse-Stop command	REV-DCM: ON= forward running OFF= deceleration to stop
MI1 ~ MI8	Multi-function input 1~8	Refer to parameters 02-01~02-08 to program the multi-function inputs MI1~MI8. Source mode: ON: the activation current is 6.5mA≧11Vdc OFF: cut-off voltage 10μA ≦11Vdc
DCM	Digital frequency signal common terminal	
SCM1	The factory setting is short-circuit. The factory setting is short-circuit. Power removal safety function for EN954-1 and IEC/EN61508 When STO1~SCM1, STO2~SCM2 are turned on, the activation current is 3.3mA ≧ 11Vdc.	
SCM2		
STO1		
STO2		
+10V	Potentiometer power supply	Power supply of analog frequency setting: +10Vdc 20mA
-10V	Potentiometer power supply	Power supply of analog frequency setting
AUI1	Analog voltage frequency input 	Impedance: 20kΩ Range: -10~+10VDC=0~ Max. Output Frequency(Pr.01-00)
AUI2		

ACM	Analog signal common terminal control	Analog sigal terminal
RA	Multi-function relay output A (N.O.)	1. User-defined funcion 2. Resistive Load 3A(N.O.)/3A(N.C.) 250VAC 5A(N.O.)/3A(N.C.) 30VDC (min. 5 VDC, 10 mA) To output different kinds of signal such as the motor drive is in operation, reaching the frequency, overload indication.
RB	Multi-function relay output A (N.O.)	
RC	Multi-function relay output B (Eror indication by factory setting)	
MRA	Multi-function output terminal (N.O.)	
MRB	Multi-function output terminal (N.O.)	
MRC	Multi-function output terminal (Operating Indication by factory setting)	
R1A	Multi-function output terminal A (N.O.)	
R2A	Multi-function output terminal A (N.O.)	
R12C	Multi-function output terminal (No function by factory setting)	
SG1+	Modbus RS-485	SG1+ switch: terminator 120 ohm (factory setting) / open
SG1-	Modbus RS-485	
CAN_L	CAN Bus	DIP Switch: terminator 120 ohm (factory setting)/ open
CAN_H	CAN Bus	
MO1	Multi-function output terminal 1 (photocoupler)	The AC motor drive releases various monitoring signals, such as drive in operation, reaching frequency and overload indication via a transistor (open collector). MO2	Multi-function output terminal 2 (photocoupler)	
MCM	Multi-function output common terminal (photocoupler)	Max 48Vdc 50mA
AFM1		0~10V, Max. output current: 2mA, Max. load: 5kΩ -10~10V, Max. output current: 2mA, Max.load :5kΩ Output current 2mA max Resolution 0~10V corresponds to the Max.operating frequency. Range: 0~10V→-10~+10V

AFM2		0~10V, Max. Output current: 2mA, Max. load: 5Kω -10~10V, Max. output current: 2mA, Max. load: 5kΩ Output current:: 2mA max Resolution: 0~10V corresponds to the Max.operating frequency. Range: 0~10V→-10~+10V
RJ-45	PIN 1,2,6,7 : Reserved PIN 3: SGND PIN 4: SG- PIN 5: SG+ PIN 8: EV	
SW2	Switching USB port	DIP Switch: NRM(factory setting)/ PRG

06 Optional Accessories

The optional accessories listed in this chapter are available upon request. Installing additional accessories to your drive would substantially improve the drive's performance. Please select an applicable accessory according to your need or contact the local distributor for suggestion.

6-1 Brake Reistors & Brake Units used in AC motor Drives

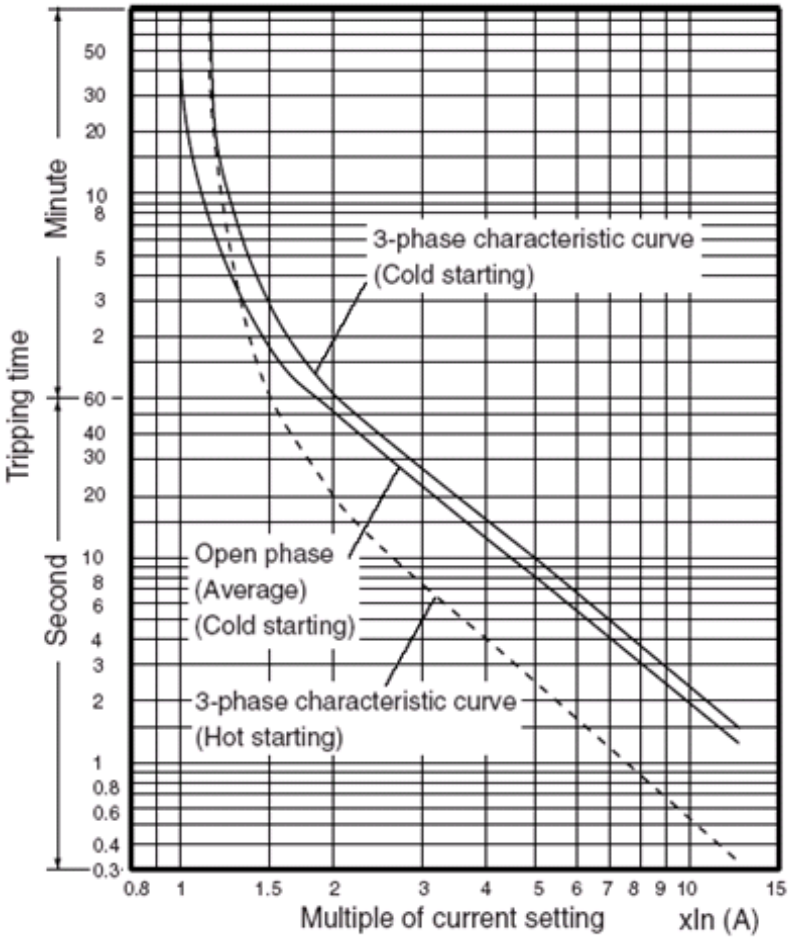
*Calculation of 125% brake toque: (kw)*125%*0.8; where 0.8 is the motor efficiency.

Since there is a resistor limit of power consumption, the longest operation time for 10%ED is 10 sec (On: 10sec/ Off: 90sec).

**Refer to the Brake Performance Curve for “Operation Duration & ED” vs. “Braking Current”.

***The calculation of the braking torque I s based on a 4-pole motor(1800 rpm).

****To dissipate heat, a resistor of 400W or lower should be fixed to the frame and maintain the surface temperature below 250°C (**482** °F); a resistor of 1000W and above should maintain the surface temperature below 600°C (**1112** °F). If the surface temperature is higher than the temperature limit, install more heat dissipating system or incrase the size of the resistor.



Thermal Relay:

Thermal relay selection is based on its overload capability. A standard braking capacity of ED is 10%ED (Tripping time=10s). The figure on the left is an example of 460V, 110kw AC motor drive. It requires the thermal relay to take 260% overload capacity for 10sec (hot starting) and the braking current is 126A. In this case, user should select a rated 50A thermal relay. The property of each thermal relay may vary among different manufacturers. Read carefully the user guide of a thermal relay before using it. .

6-2 Non-fuse Circuit Brekaer

Comply with UL standard: Per UL 508, paragraph 45.8.4, part a. The rated current of a breaker shall be 2~4 times of the maximum rated input current of AC motor drive.

3-phase	
Model	Recommended non-fuse breaker(A)

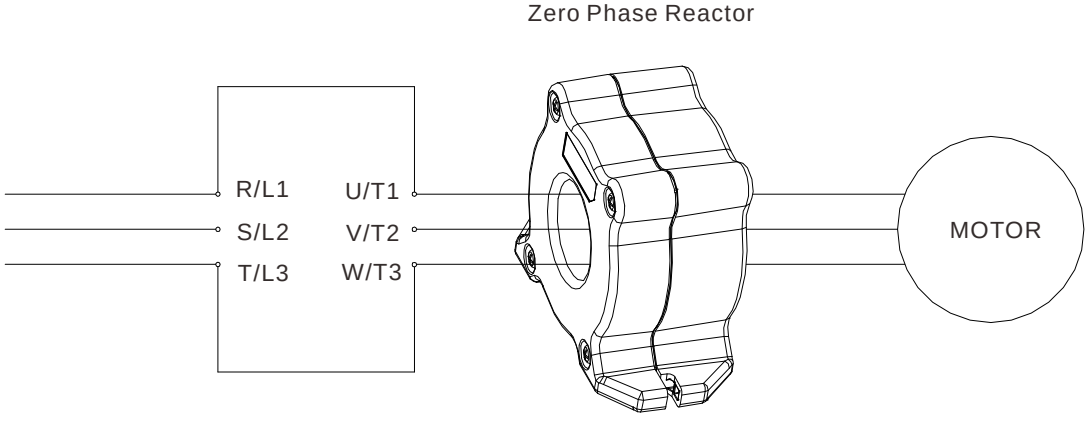
Note: 600V insulated cable wire

Diagram A

Put all wires through at least one core without winding



Note 1: The table above gives approximate wire size for the zero phase reactors but the selection is ultimately governed by the type and diameter of cable fitted i.e. the cable must fit through the center hole of zero phase reactors.

Note 2: Only the phase conductors should pass through, not the earth core or screen.

Note3: When long motor output cables are used an output zero phase reactor may be required to reduce radiated emissions from the cable.

6-6 EMI Filter

For the detailed specifications of the EMI filters listed in the table below, search the Internet.

Motor Drive	Applicable EMI Filter
VFD022ED21S VFD037ED21S	MDF50 (Roxburgh EMC)
VFD040ED43S VFD055ED43S	EMF018A43A

VFD300ED23S VFD370ED23S VFD750ED43S	B84143D0200R127

EMI Filter Installation

All electrical equipment, including AC motor drives, will generate high-frequency/low-frequency noise and will interfere with peripheral equipment by radiation or conduction when in operation. By using an EMI filter with correct installation, much interference can be eliminated. It is recommended to use DELTA EMI filter to have the best interference elimination performance.

We assure that it can comply with following rules when AC motor drive and EMI filter are installed and wired according to user manual:

- **EN61000-6-4**
- **EN61800-3: 1996**
- **EN55011: (1991) Class A Group 1 (1st Environment, restricted distribution)**

General precaution

1. EMI filter and AC motor drive should be installed on the same metal plate.
2. Install AC motor drive on footprint EMI filter or install EMI filter as close as possible to the AC motor drive.
3. Wire as short as possible.
4. Metal plate should be grounded.
5. The cover of EMI filter and AC motor drive or grounding should be fixed on the metal plate and the contact area should be as large as possible.

Choose suitable motor cable and precautions

Improper installation and choice of motor cable will affect the performance of EMI filter. Be sure to observe the following precautions when selecting motor cable.

1. Use the cable with shielding (double shielding is the best).
2. The shielding on both ends of the motor cable should be grounded with the minimum length and maximum contact area.
3. Remove any paint on metal saddle for good ground contact with the plate and shielding.

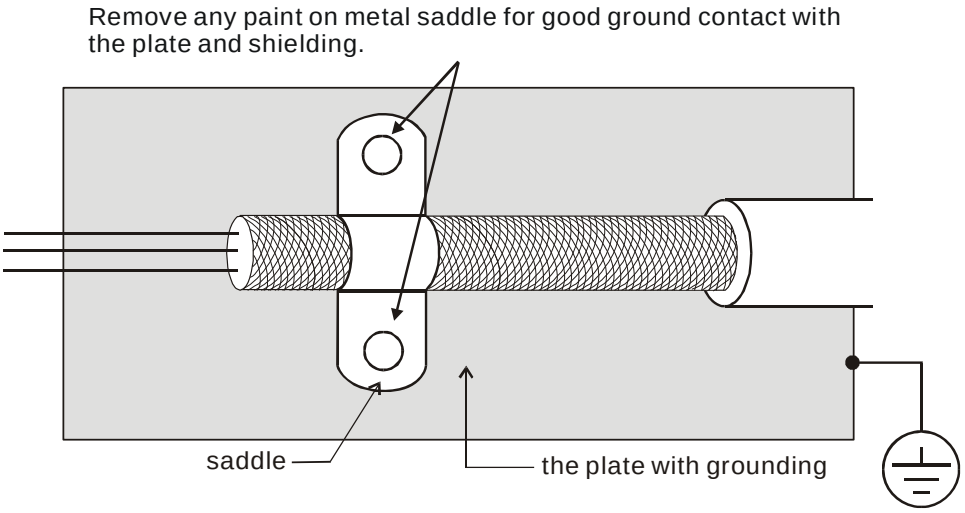

Figure 1

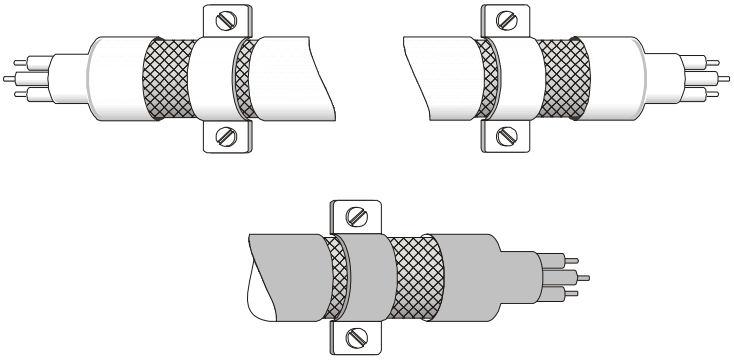

Figure 2

The length of motor cable

1. Required cable length when the motor drive is at full load.

   a. Non-shielded cable: For models of 5.5kW(7.5HP) and below, the maximum cable length is 100m (328ft) . For 7.5kW(10HP) and above, the maximum cable length is 200m(656ft)
   b. Shielded cable: For models of 5.5kw(7.5HP) and below, the maximum cable length is 50m(165ft). For models of 7.5kW(10HP), the maximum cable length is 100m(328ft).

   If the cable length is longer than the recommended lengthes above, it will be necessary to install an output reactor.

NOTE

- If the length is too long, the stray capacitance between cables will increase and may cause leakage current. It will activate the protection of over current, increase leakage current or not insure the correction of current display. The worst case is that AC motor drive may damage.
- If more than one motor is connected to the AC motor drive, the total wiring length is the sum of the wiring length from AC motor drive to each motor.
- For the 460V series AC motor drive, when an overload relay is installed between the drive and the motor to protect motor over heating, the connecting cable must be shorter than 50m. However, an overload relay malfunction may still occur. To prevent the malfunction, install an output reactor (optional) to the drive or lower the carrier frequency setting (Pr.00-12).

2. Consequence of the surge voltages on the motor

When a motor is driven by an AC motor drive of PWM type, the motor terminals will experience surge voltages easily due to components conversion of AC motor drive and cable capacitance. When the motor cable is very long (especially for the 460V series), surge voltages may reduce insulation quality. To prevent this situation, please follow the rules below:

- Use a motor with enhanced insulation.
- Connect an output reactor (optional) to the output terminals of the AC motor drive
- The length of the cable between AC motor drive and motor should be as short as possible (10 to 20 m or less)
- For models 7.5hp and above:

Insulation level of motor	1000V	1300V	1600V
460VAC input voltage	20m(66ft)	100m(328ft)	400m(1312ft)
230VAC input voltage	400m(1312ft)	400m(1312ft)	400m(1312ft)

- For models 5hp and less:

Insulation level of motor	1000V	1300V	1600V
460VAC input voltage	20m(66ft)	50m(165ft)	50m(165ft)
230VAC input voltage	100m(328ft)	100m(328ft)	100m(328ft)

NOTE

Never connect phase lead capacitors or surge absorbers to the output terminals of the AC motor drive.

6-7 Digital Keypad

1 KPC-CE01

A: LED Display

Display frequency, current, voltage and error etc.

B: Status Indicator

F: Frequency Command
H: Output Frequency
U: User Defined Units
ERR: CAN Error Indicator
RUN: CAN Run Indicator

C: Function

(Refer to the chart follows for detail description)

Key	Description
ESC	ESC Key Press ESC key to return to the previous page. It also functions as a return to last category key in the sub-menu.
MENU	Menu Key Press MENU key under any condition will return to the main MENU. Menu content: 1. Parameter Detail 3. Keypad locked 2. Copy Parameter 4. PLC Function
ENTER	ENTER Key Press ENTER and go to the next level. If it is the last level then press ENTER to execute the command.
HAND	HAND ON Key 1. HAND key will operates according to the parameter settings when the source of HAND master frequency command and the source of HAND operation command is properly set,. The factory setting of the source command for frequency and operation are from the digital keypad . 2. Press HAND key in stop status, the drive setting switches to the parameter setting of HAND. Press HAND key in during operation, the drive will come to stop then switches to the parameter setting of HAND. 3. When process complete: H/A LED ON.
AUTO	Auto Operation Key 1. AUTO function executes according to the parameter settings of the source of AUTO frequency and AUTO operation. The factory setting is the external terminal (source of operation is 4-20mA). 2. Press the ATUO key in stop status, the drivel switches to auto-setting. Press the auto key during operation status, the drivel will come to stop and switch to auto-setting. 3. When process complete: H/A LED is OFF
FWD/REV	Operation Direction Key 1. FWD/REV key controls the operation direction but will NOT activate the drive. FWD: forward, REV: reverse. 2. The drive operates in the direction as shown by the LED light.
RUN	Start Key 1. This button is functional only when the keypad is the source of the command. 2. This button allows the motor drive to run by following its settings. See Description of LED functions for LED status 3. Press repeatedly the “RUN” button is allow while the motor drive is stopping.
STOP	Stop Key. 1. STOP key has the highest priority in command. 2. Press STOP key, the drive will come to stop under any condition. 3. The RESET key can be used to reset the drive when faults occur. If the RESET key is not responding, check MENU → Fault Records and check the most recent fault.

Descriptions of LED Functions

<table>
<tr><th>LED</th><th>Descriptions</th></tr>
<tr><td> 
</td><td>Steady ON: operation indicator of the AC motor drive, including DC brake, zero speed, standby, restart after fault and speed search.
Blinking: drive is decelerating to stop or in the status of base block.
Steady OFF: drive doesn’t execute the operation command</td></tr>
<tr><td> 
</td><td>Steady ON: stop indicator of the AC motor drive.
Blinking: drive is in the standby status.
Steady OFF: drive doesn’t execute “STOP” command.</td></tr>
<tr><td> 
</td><td>Operation Direction LED 『Green light= Forward』; 『Red light= Reversely』
Steady ON: the drive is running forward.
Blinking: the drive is changing direction.
Steady Off: the drive is running reversely.</td></tr>

CBC-K16FT	16 feet RJ45 extension lead (approximately 4.9 m)

6-8 **USB/RS-485 Communication Interface IFD6530**

⚠ Warning

✓ *Read thoroughly this section before installation and putting it into use.*

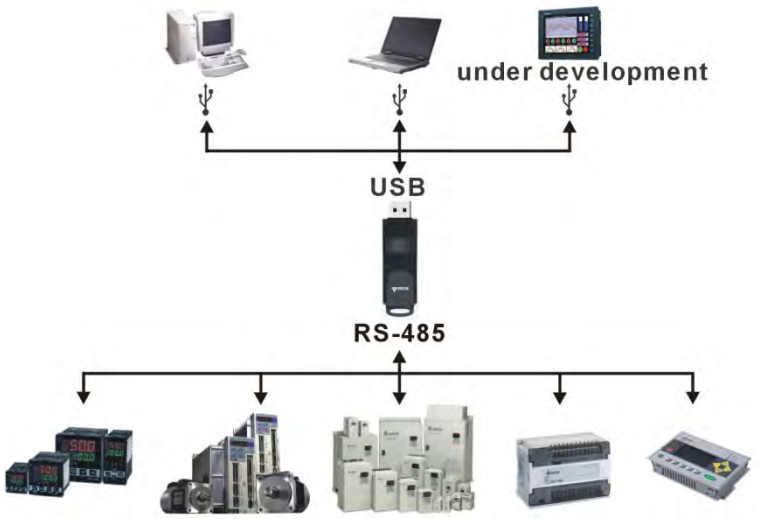
✓ *The content of this section and the driver file may be revised without prior notice. Consult our distributors or download the most updated instruction/driver version at* AC Motor Drive > Optional

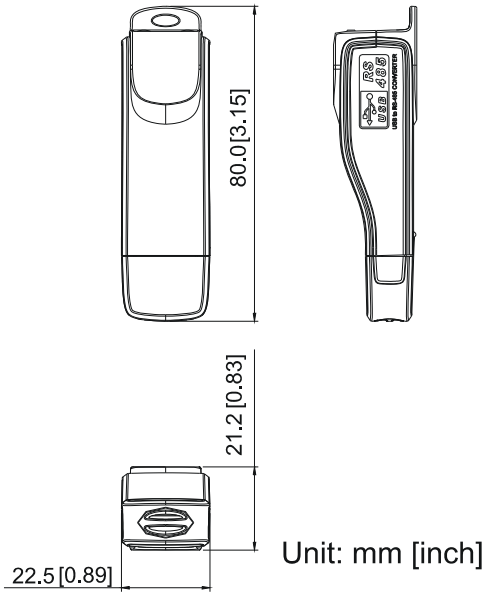
Introduction

IFD6530 is a convenient RS-485-to-USB converter, which does not require external power-supply and complex setting process. It supports baud rate from 75 to 115.2kbps and auto switching direction of data transmission. In addition, it adopts RJ-45 in RS-485 connector for users to wire conveniently. And its tiny dimension, handy use of plug-and-play and hot-swap provide more conveniences for connecting all DELTA IABU products to your PC.

Applicable Models: All DELTA IABU products.

■ Application & Dimension:





Specifications

Power supply	No external power is needed
Power consumption	1.5W
Isolated voltage	2,500VDC
Baud rate	75, 150, 300, 600, 1,200, 2,400, 4,800, 9,600, 19,200, 38,400, 57,600, 115,200 bps
RS-485 connector	RJ-45
USB connector	A type (plug)
Compatibility	Full compliance with USB V2.0 specification
Max. cable length	RS-485 Communication Port: 100 m
Support RS-485 half-duplex transmission

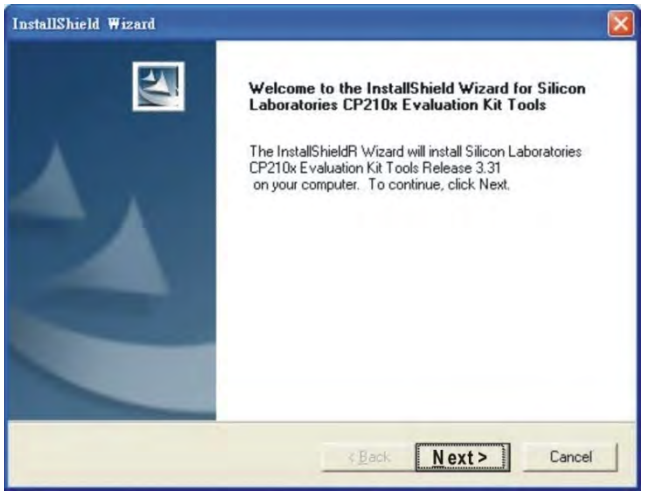
Prepration before Installing Driver

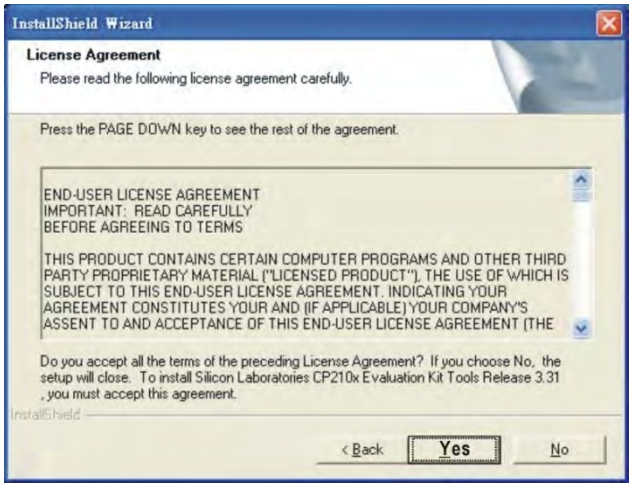
Extract the driver file (IFD6530_Drivers.exe) by following steps. You could find driver file (IFD6530_Drivers.exe) in the CD supplied with IFD6530.

✎**Note:** DO NOT connect IFD6530 to PC before extracting the driver file.

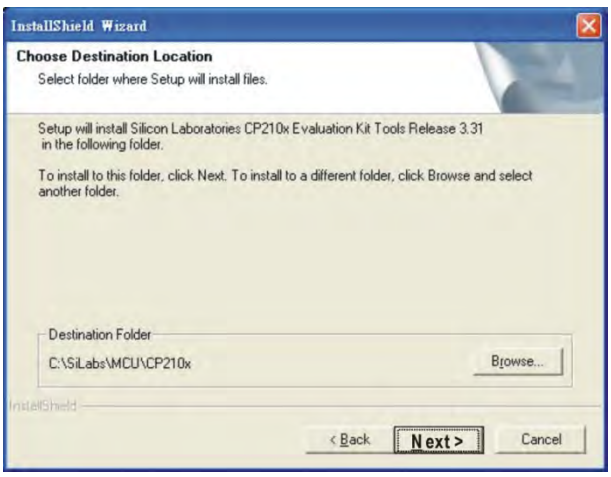
STEP 1



STEP 2



STEP 3



STEP 4

STEP 5

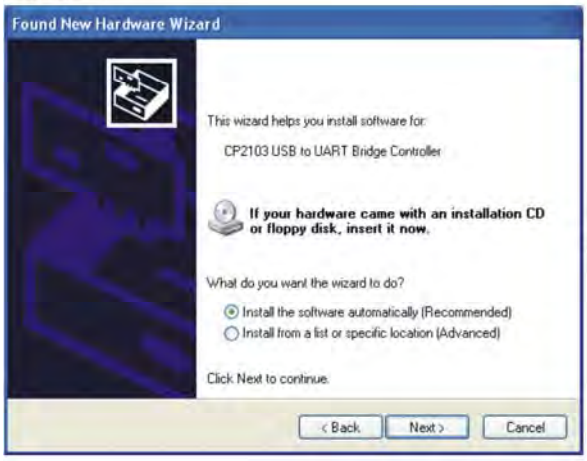
You should have a folder marked SiLabs under drive C. c:\ SiLabs

Intalling the Driver

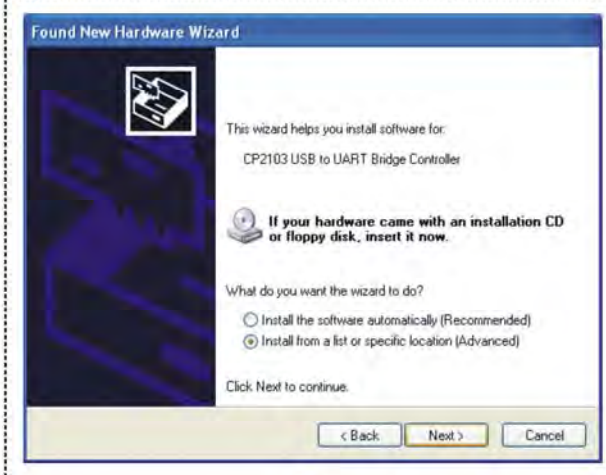
After connecting IFD6530 to PC, install driver by following steps below.

STEP 1

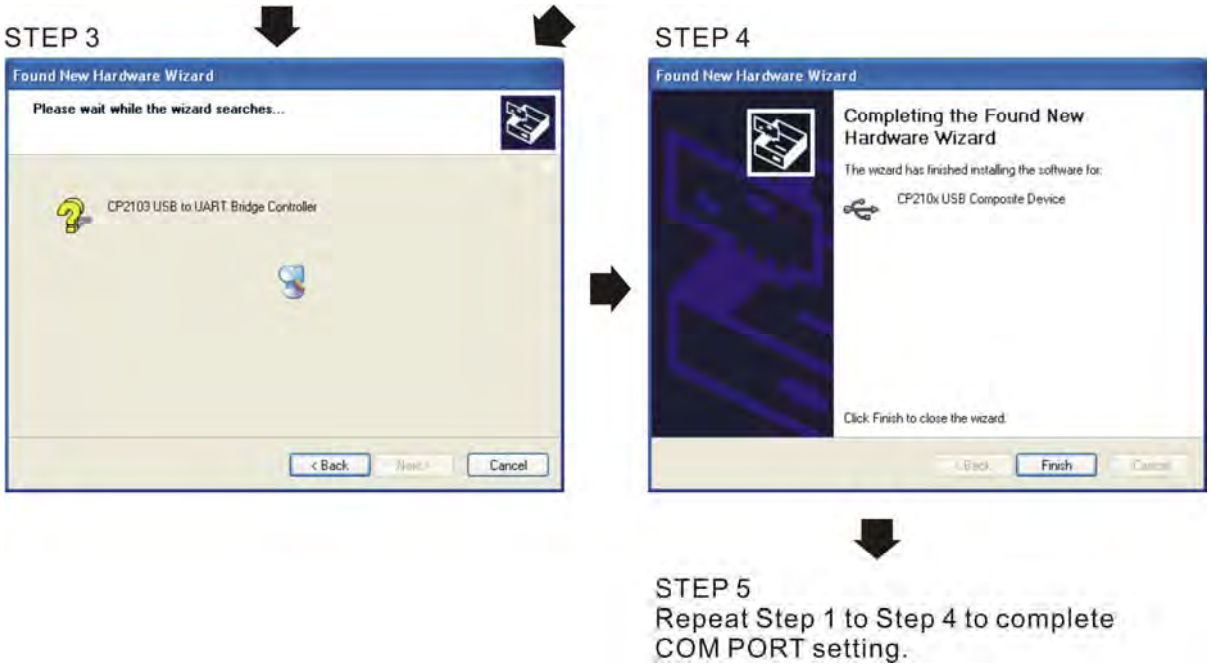
STEP 2



OR



Browse and select directory, or enter C:\SiLabs\MCU\CP210x\WIN



LED Display

1. Steady Green LED ON: power is ON.
2. Blinking orange LED: data is transmitting.

07 Options Cards

Select applicable option cards for your drive or contact local distributor for suggestion.

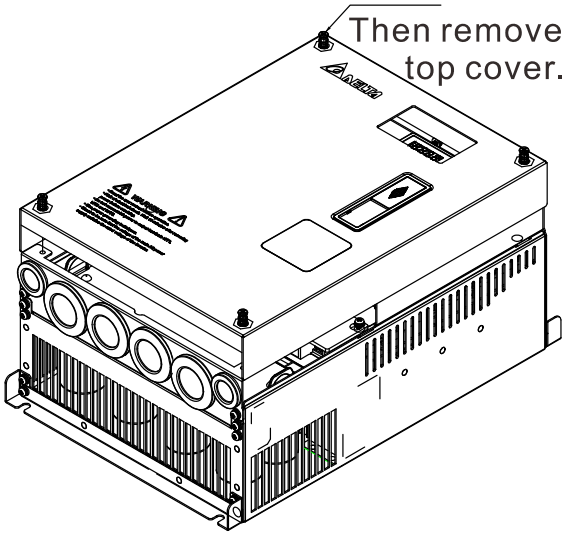
To prevent drive damage during installation, remove the digital keypad and the cover before wiring. Refer to the following instruction.

Remove the top cover

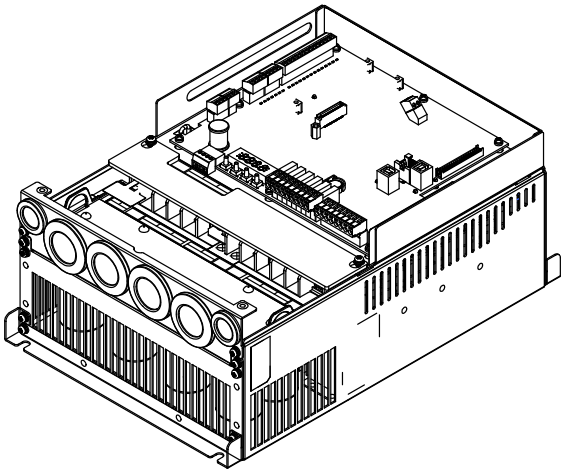
Frame B, C & D Screw Torque: Kg-cm [lb-in.]

Step1

Loosen the 4screws.
Then remove the top cover.

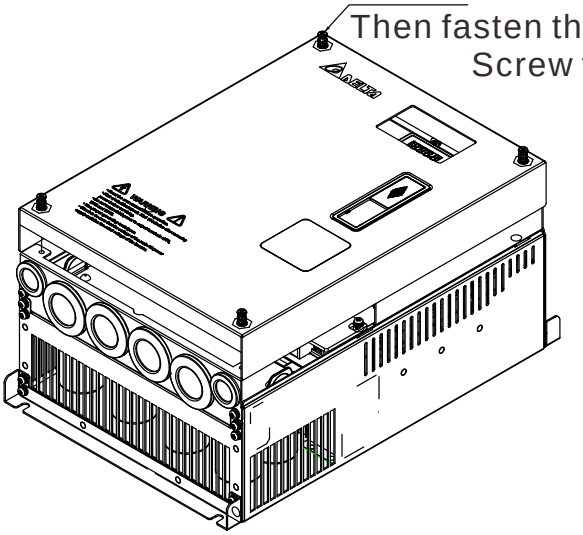


Step 2



Step 3

Put back the top cover.
Then fasten the 4 screws,
Screw torque 15kgf-cm



Frame E Screw Torque: Kg-cm [lb-in.]

Step 1	Step 2
Loosen the 2 screws, Then follow the direction of the arrow to remove the top cover 	Motor drive w/o the top cover. Step 3	
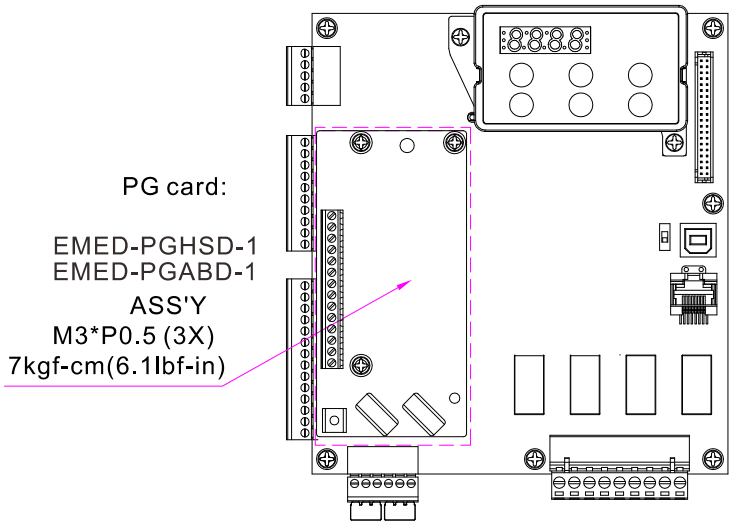
Put back the top cover. Then fasten the 2 screws. Screw torque:15kgf-cm 	

Vertical viewe of the motor drive & Screw's Specificatons:

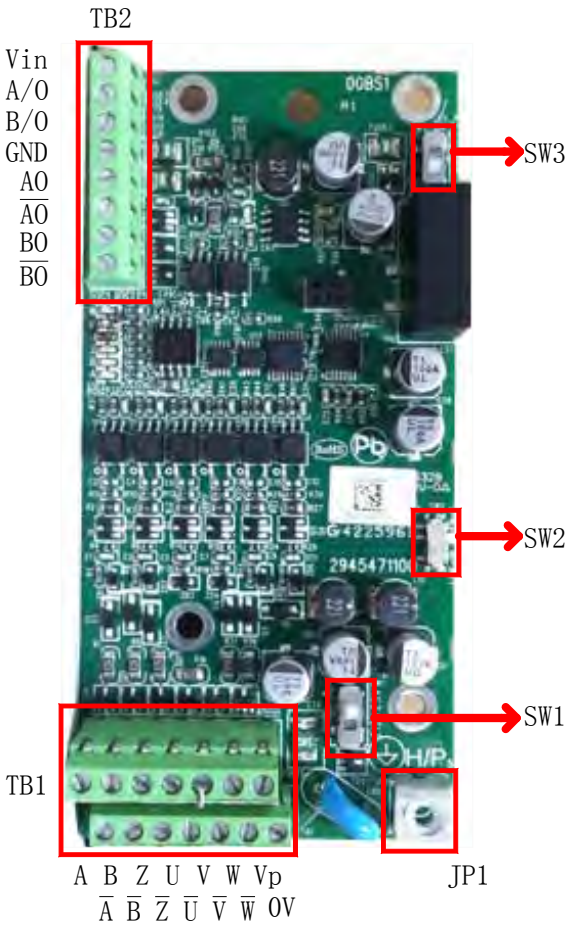


Screws' Specification for Option Card Terminal:

PG Card	Wire Gauge	Torque
EMED-PGABD-1	30~16AWG（0.05~1.31mm^2）	1.6Kg-cm [1.4lb-in]
EMED-PGHSD-1	30~16AWG（0.05~1.31mm^2）	1.6Kg-cm [1.4lb-in]

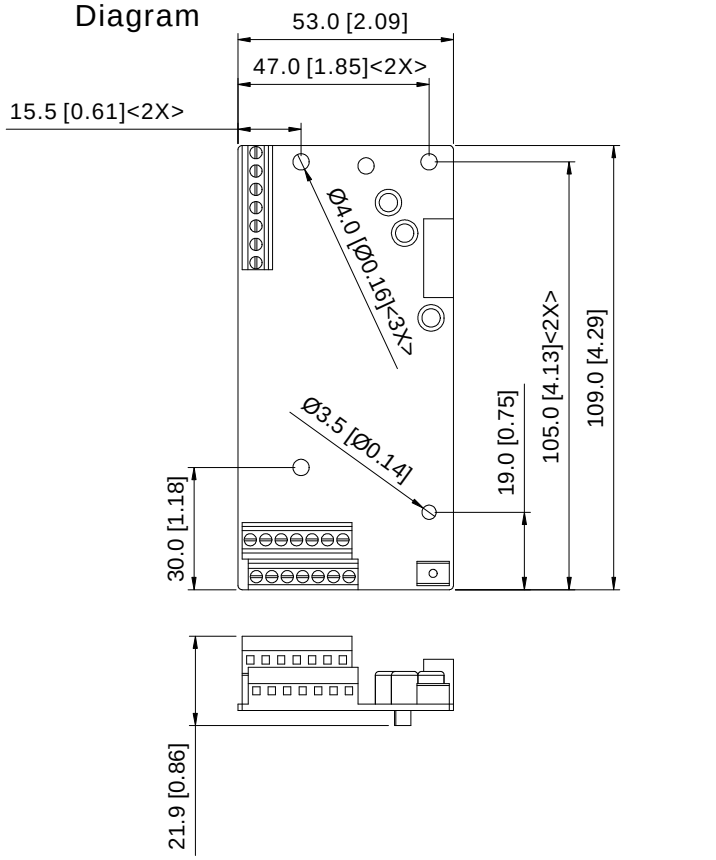
7-1 EMED-PGABD-1

Applicable enoder: A/B/Z & U/V/W Absolute Encoders



Dimension unit：mm[inch.]

Dimension Diagram unit: mm [inch]



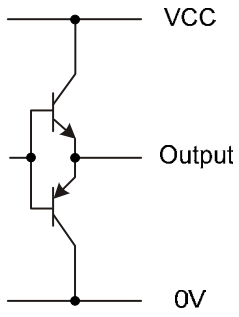
NOTE

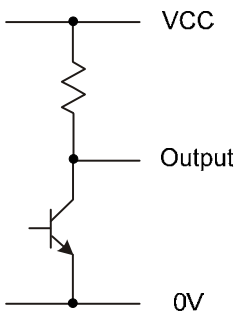
- Verify if the SW1 is set to the correct output voltage before power on.
- Keep away from any high voltage line when wiring the mtor drive to avoid interference.

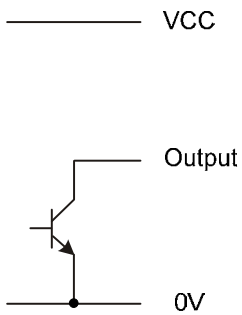
Terminal Specification

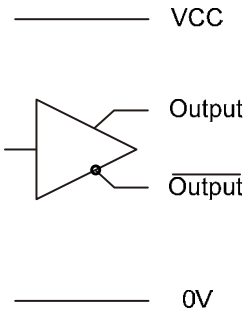
Terminals		說明 Descriptions
TB2	Vin	Terminal for voltage input, to adjust the amplitude of output voltage at terminal A/O and terminal B/O. It also provdieds a 5V voltage to support line driver's signal. Vin voltage range: 8~24V, Max: 24V.
	A/O, B/O	Output signal of the push-pull frequency divider Factory setting: Output amplitude is about +24V. Use SW2 to cut off the internal default power. Input required power (i.e. output voltage's amplitude) DVi voltage range Max：24V (Push-Pull Voltage Output) Max. output frequency: 100kHz Support frequency dividing output, the frequency dividing range: 1~31Hz.
	GND	Common ground terminal connecting to the host controller and the motor drive.
	AO, /AO, BO, /BO	Line driver pulse output signal (Line Driver RS422) Max. output frequency: 150kHz Support frequency dividing output, the frequency dividing range: 1~31Hz.
TB1	VP	Power output of encoder Note: Use SW1 to set up output voltage Voltage: +5V±0.5V or +12V±1V Current: 200mA max
	0V	Common power terminal of encoder
	A、$\overline{A}$、B、$\overline{B}$、Z、$\overline{Z}$	Incremental encoder signal input terminal Types of input signal: line drive, voltage output, push-pull, open-collector) Note: Different input signal needs different wiring method. See user manual for wiring diagrams. Max.input frequency: 150kHz
	U、$\overline{U}$、V、$\overline{V}$、W、$\overline{W}$	Absolute encoder signal input terminal Types of input signal: : line drive, voltage, push-pull, open-collector) Note: Different input signal needs different wiring method. See user manual for wiring diagrams Max.input frequency: 150kHz
JP1	⏚	Ground Terminal Connect the power supply of the motor drive to the ground. Suport PG shielding
SW1		Switch between encoder's 5V/12V power.
SW2		Offline Dectection Switch. Switch the the SW2 to Line-D side to enable offline detection when Line-D input signal. Switch the SW2 to OPEN-C sideto disable offline detection function when OPEN-C input signal.
SW3		Switch of power supply for frequency division Switch SW3 to INP_sied to provide 24V power for internal use. Switch SW3 to EXP side to provide 24V power for external use (client).

Applicable encoders:

Different Types of Encoder Output			
Push- pull	Voltage Output	Open collector	Line Driver
			




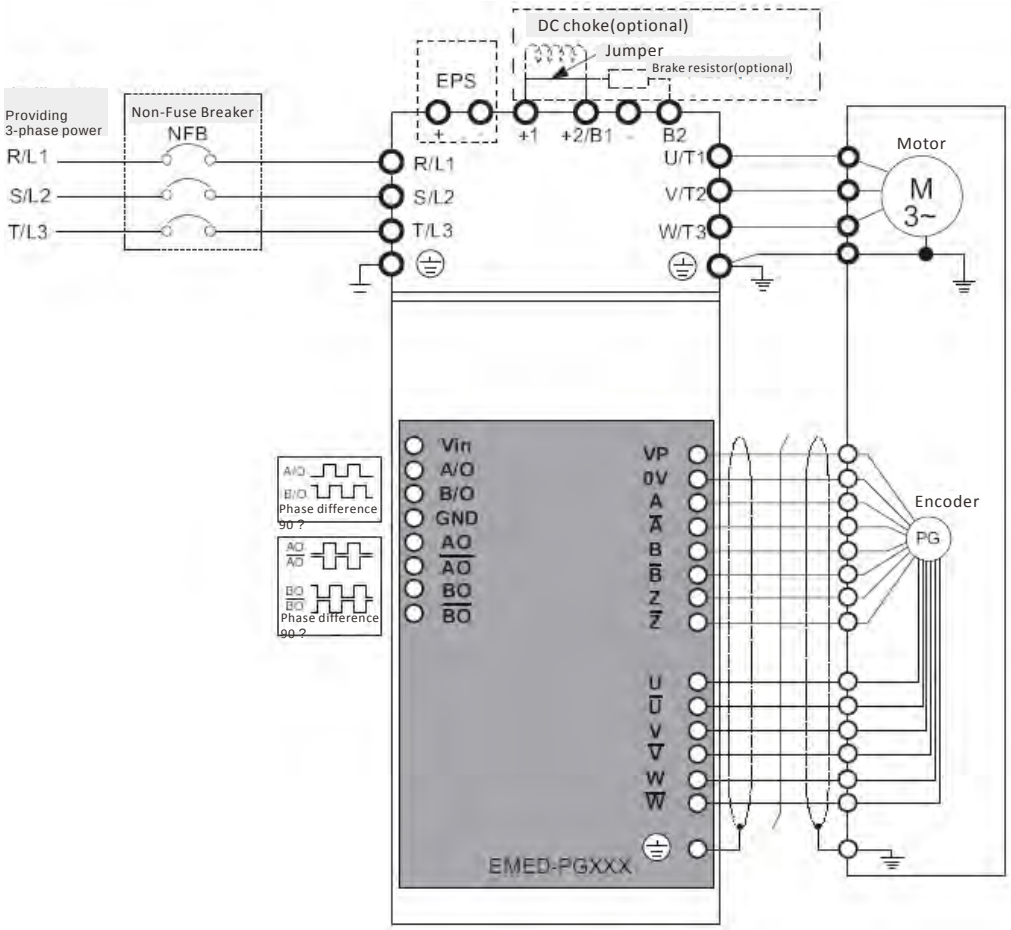




NOTE

- Verify if the SW1 is set to the correct output voltage before power on.
- Keep away from any high voltage line when wiring the mtor drive to avoid interference

Wiring Diagram



Set up the Signal of the Frequency Division

① After the encoder input a PULSE signal, there will be an output signal of the division factor “n.” Use Pr10-29 <Output of PG card’s frequency division> to set up.

② Setup of Pr10-29 <PG card’s frequency division>:
Output of decimal frequency division setting. Range of the division factor “n”: 1~31.

③ Pr10-30 <Mode of output of PG card’s frequency division>

Bit3	Bit2	Bit1	Bit0
X	X	**OUT/M**	**IN/M**

OUT/M: Mode of pulse output of frequency divsion;
IN/M: Mode of pulse input of frequency division;
“X” is for backup while “0” is a value to write.
Setting and Description of Input Mode (IN/M) & Output Mode(OUT/M):

OUT/M	IN/M	Division factor	
		A is ahead of B	B is ahead of A
0	0		1	0		X	1		
NOTE

- In the waveform A-/A, B-/B are the PG card input signals; AO-$\overline{AO}$, BO-$\overline{BO}$ are the differential output frequency division signals. (Use a differential probe to measure.)
- Division factor “n”: Set 15 to have the input signal divided by 15.)
- When OUT/M, IN/M set as 0.0, the PG card input signal A-/A, B-/B are square waves while AO-$\overline{AO}$ 、BO-$\overline{BO}$ are frequency division output.
- When OUT/M, IN/M are set as 1.0, the PG card input signal A-/A、B-/B are square waves while the BO-$\overline{BO}$ is the phase indicator of A and B
- When OUT/M, IN/M are set as X, B-/B phase has to be direction indication input signal (e.g. When B-/B is LOW, it means A is ahead of B. When B-/B is HIGH, it means B is ahead of A)
- Take Pr10-29 and Pr10-30 as examples. When frequecy division value =1 5, OUT/M =1, IN/M = 0, set Pr10-29 = 15 and Pr10-30 = 0002h.
  Set Pr100-29 =15,
  Set Pr10-30 =0002h

Terminal Function:

Terminals		Descriptions	Specifications
J3	VP	Encoder voltage input. Use SW2 to set +5V/+8V	Voltage: +5.1Vdc±0.3V; +8.4Vdc±1.5V Current: 200mA max.
	0V	Encoder common power terminal	Reference level of encoder's power.
	A+、A-、B+、B-	Encoder sine wave differential signal input （Incremental signal）	Input frequency:40k Hz max.  0.8....1.2Vss (≈1Vss; Z_0=120Ω)
	+SIN、+COS、REFSIN、REFCOS	Encoder sine wave differential signal input	Input frequency: 20k Hz max. 	CLOCK+, CLOCK-	CLOCK differential output	(Line Driver RS422 Level output)
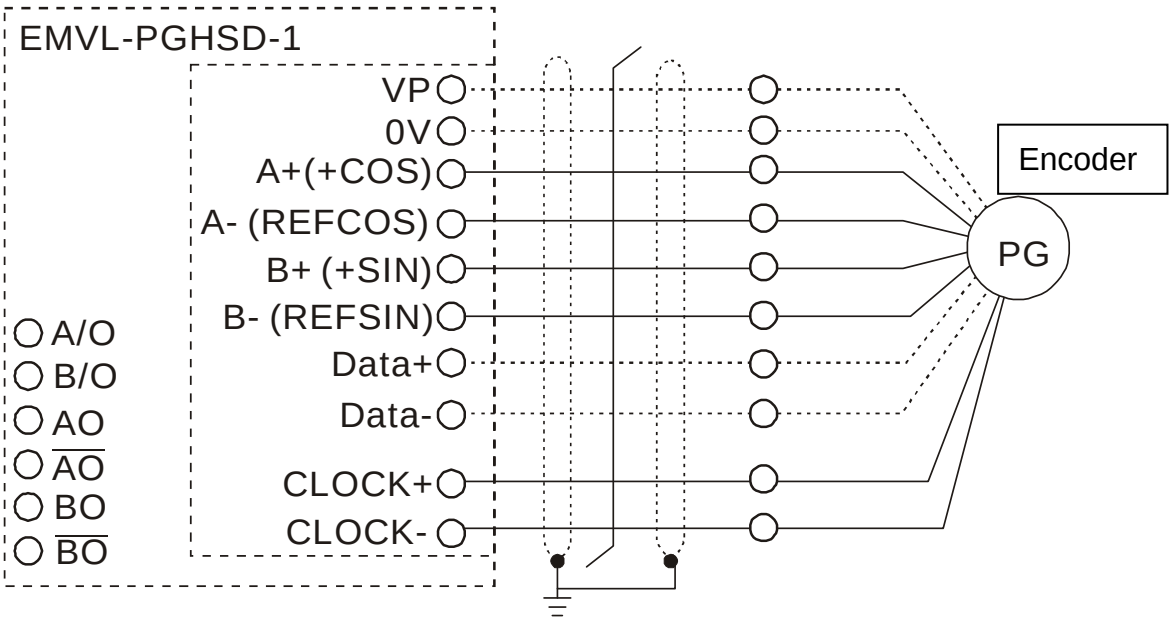
	Data+, Data-	RS485 communication interface	Terminal resistance is about 130Ω

Wiring Diagram



Set up the Signal of the Frequency Division

① After the encoder input a PULSE signal, there will be an output signal of the division factor "n." Use Pr10-29 <Output of PG card's frequency division> to set up.

② Pr10-30 <Mode of output of PG card's frequency division>

Output of decimal frequency division setting. Range of the division factor "n": 1~31.

③ Pr10-30 <Mode of output of PG card's frequency division>

Bit3	Bit2	Bit1	Bit0
X	X	**OUT/M**	**IN/M**

OUT/M: Mode of pulse output of frequency division;

IN/M: Mode of pulse input of frequency division;

"X" is for backup while "0" is a value to write.

Setting and Description of Input Mode (IN/M) & Output Mode(OUT/M):

OUT/M	IN/M	Division factor	
		A is ahead of B	B is ahead of A
0	0		1	0		
			X	1		
NOTE

- In the waveform A-/A, B-/B are the PG card input signals; AO-$\overline{AO}$, BO-$\overline{BO}$ are the differential output frequency division signals. (Use a differential probe to measure.)
- Division factor “n”: Set 15 to have the input signal divided by 15.)
- When OUT/M, IN/M set as 0.0, the PG card input signal A-/A, B-/B are square waves while AO-$\overline{AO}$ 、BO-$\overline{BO}$ are frequency division output.
- When OUT/M, IN/M are set as 1.0, the PG card input signal A-/A、B-/B are square waves while the BO-$\overline{BO}$ is the phase indicator of A and B
- When OUT/M, IN/M are set as X, B-/B phase has to be direction indication input signal (e.g. When B-/B is LOW, it means A is ahead of When B-/B is HIGH, it means B is ahead of A)
- Take Pr10-29 and Pr10-30 as examples. when frequency division value =1 5, OUT/M =1, IN/M = 0, set Pr10-29 = 15 and Pr10-30 = 0002h.
  Set Pr100-29 =15,
  Set Pr10-30 =0002h

Bit3	Bit2	Bit1	Bit0

*Assumes operation at the rated output. Input current rating varies depending on the power supply, input reactor, wiring connections and power supply impedance.

General Specifications

Control Characteristics	Control Method	1: V/F, 2: VF+PG, 3: SVC, 4: FOC+PG, 5: TQC+PG, 6:FOC+PM
	Starting Torque	Reach up to 150% or above at 0.5H Under FOC+PG or FOC+PM mode, starting torque can reach 150% at 0Hz.
	Speed Control Range	1:100(up to 1:1000 when using PG card)
	Speed Control Resolution	±0.5%(up to ±0.02% when using PG card)
	Speed Response Ability	5Hz(Up to 30Hz for vector control)
	Max. Output Frequency	0.00 to 400Hz
	Output Frequency Accuracy	Digital Command 0.005%, Analog Command 0.5%
	Frequency Setting Resolution	Digital Command 0.01Hz, Analog Command: 1/4096(12 bit) of the max. output frequency.
	Torque limit	Max. is 200% torque current
	Torque Accuracy	±5%
	Accel/ Decel Time	0.00~600.00 seconds
	V/F Curve	Adjustable V/f curve using 4 independent points and square curve.
	Frequency Setting Signal	±10V
	Brake Torque	About 20%
Protection Characteristics	Motor Protection	Electronic thermal relay protection.
	Over-current Protection	The current forces 200% of the over-current protection and 250% of the rated current.
	Ground Leakage Current Protection	Higher than 50% rated current
	Overload Ability	Constant torque: 150% for 60 seconds, variable torque: 200% for 3 seconds
	Over-voltage Protection	Over-voltage level: Vdc > 400/800V; low-voltage level: Vdc < 200/400V
	Over-voltage Protection for the Input Power	Varistor (MOV)
	Over-temperature Protection	Built-in temperature sensor
Environment	Protection Level	NEMA 1/IP20
	Operation Temperature	-10℃~40℃, Up to 50℃ under derating operation
	Storage Temperature	-20℃~60℃
	Ambient Humidity	90% RH以下 (non- condensing)
	Vibration	1.0G less than 20Hz, 0,6G at 20~60 Hz
	Installation Location	Altitude 1,000m or lower, keep from corrosive gasses, liquid and dust.
	Power System	TN System[*1*2]
Certifications		(UL mark excludes VFD022ED21S and VFD037ED21S)

*1: TN system: The neutral point of the power system connects to the ground directly. The exposed metal components connect to the ground via the protective earth conductor.

*2: Single phase models use single phase three wire power system.

09 Digital Keypad

9-1Descriptions of Digital keypad

Digital Operation PanelKPED-LE01

Function of Buttons

Buttons	Description
	Horizontal movement button: To move the cursor position for value adjustment.
	Reset the the motor drive after fault occurred.
	Change between different diplay mode.
	Parameter setting button: To read or modify various parameter settings.
	1. Two buttons available: Up and Down button 2. Press Up or Down button to increase or decrease the value of a number. 3. Press Up or Down button to choose between menus and languages.

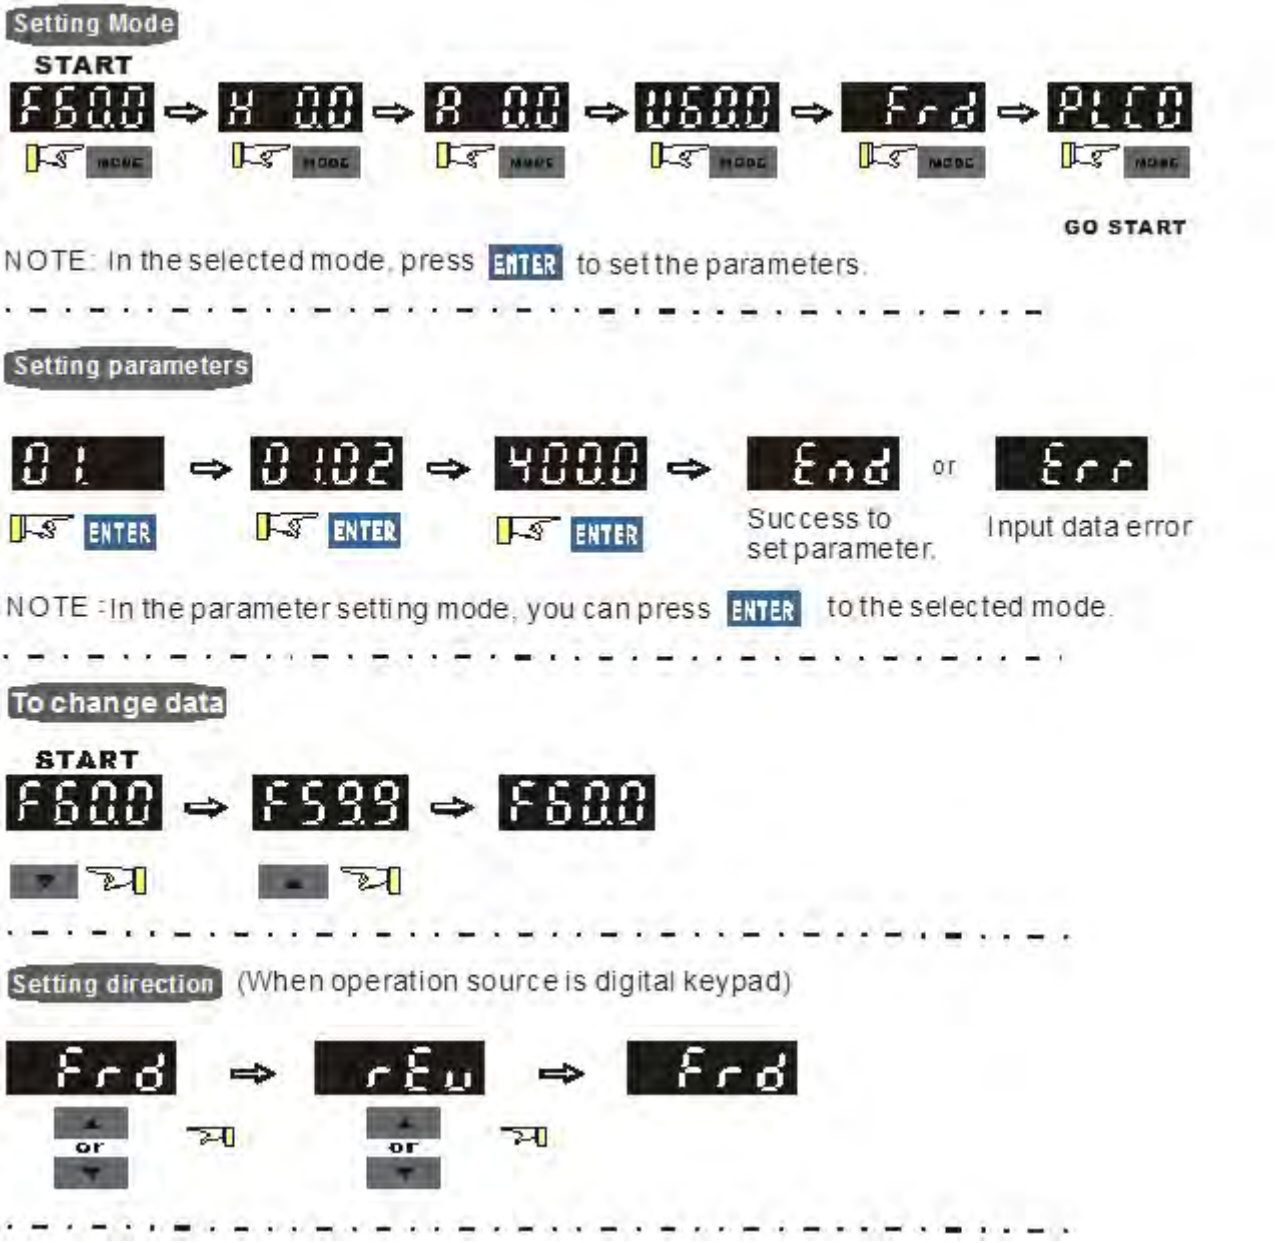
LED Display

LED	Description
	**Status Display:** UP: Moving up. DN: Moving down D1: MI1 status D2:MI2 status D3:MI3 status D4:MI4 status
	**Main Display Area:** To display frequency, current, voltage, rotaion direction, user defined units, errors and warnings.

Description of the Displayed Functions

Displayed Function	Description
	Display the frequency setting of the VFD-ED
	Display the actual frequency delivered from VFD-ED to the motor.
	Display the user defind value at Pr00-04.
	Display the current (ampere)
	Display the selected parameter
	Display the value set at a parameter
	Display the external fault
	Display “End” for approximately 1 second if input has been accepted by pressing ENTER key. After a parameter value has been set, the new value is automatically stored in the register. To modify an entry, use the ▲ and ▼ keys.
	If the command given by the user is not accepted or the value of the command exceeds the allowed range, this error message will be displayed.

9-2 Operating theBuilt-in Digital Keypad



9-3 Description of the Digital Keypad KPC-CC01

KPC-CC01

Communication Interface
RJ-45 (socket), -485 interface;

Installation Method
1. Embedded type and can be put flat on the surface of the control box. The front cover is water proof.
2. Buy a MKC-KPPK model to do wall mounting or embedded mounting. Its protection level is IP66.
3. The maximum RJ45 extension lead is 5 m (16ft)
4. This keypad can also be used on Delta's motor drive C2000, CH2000 and CP2000.

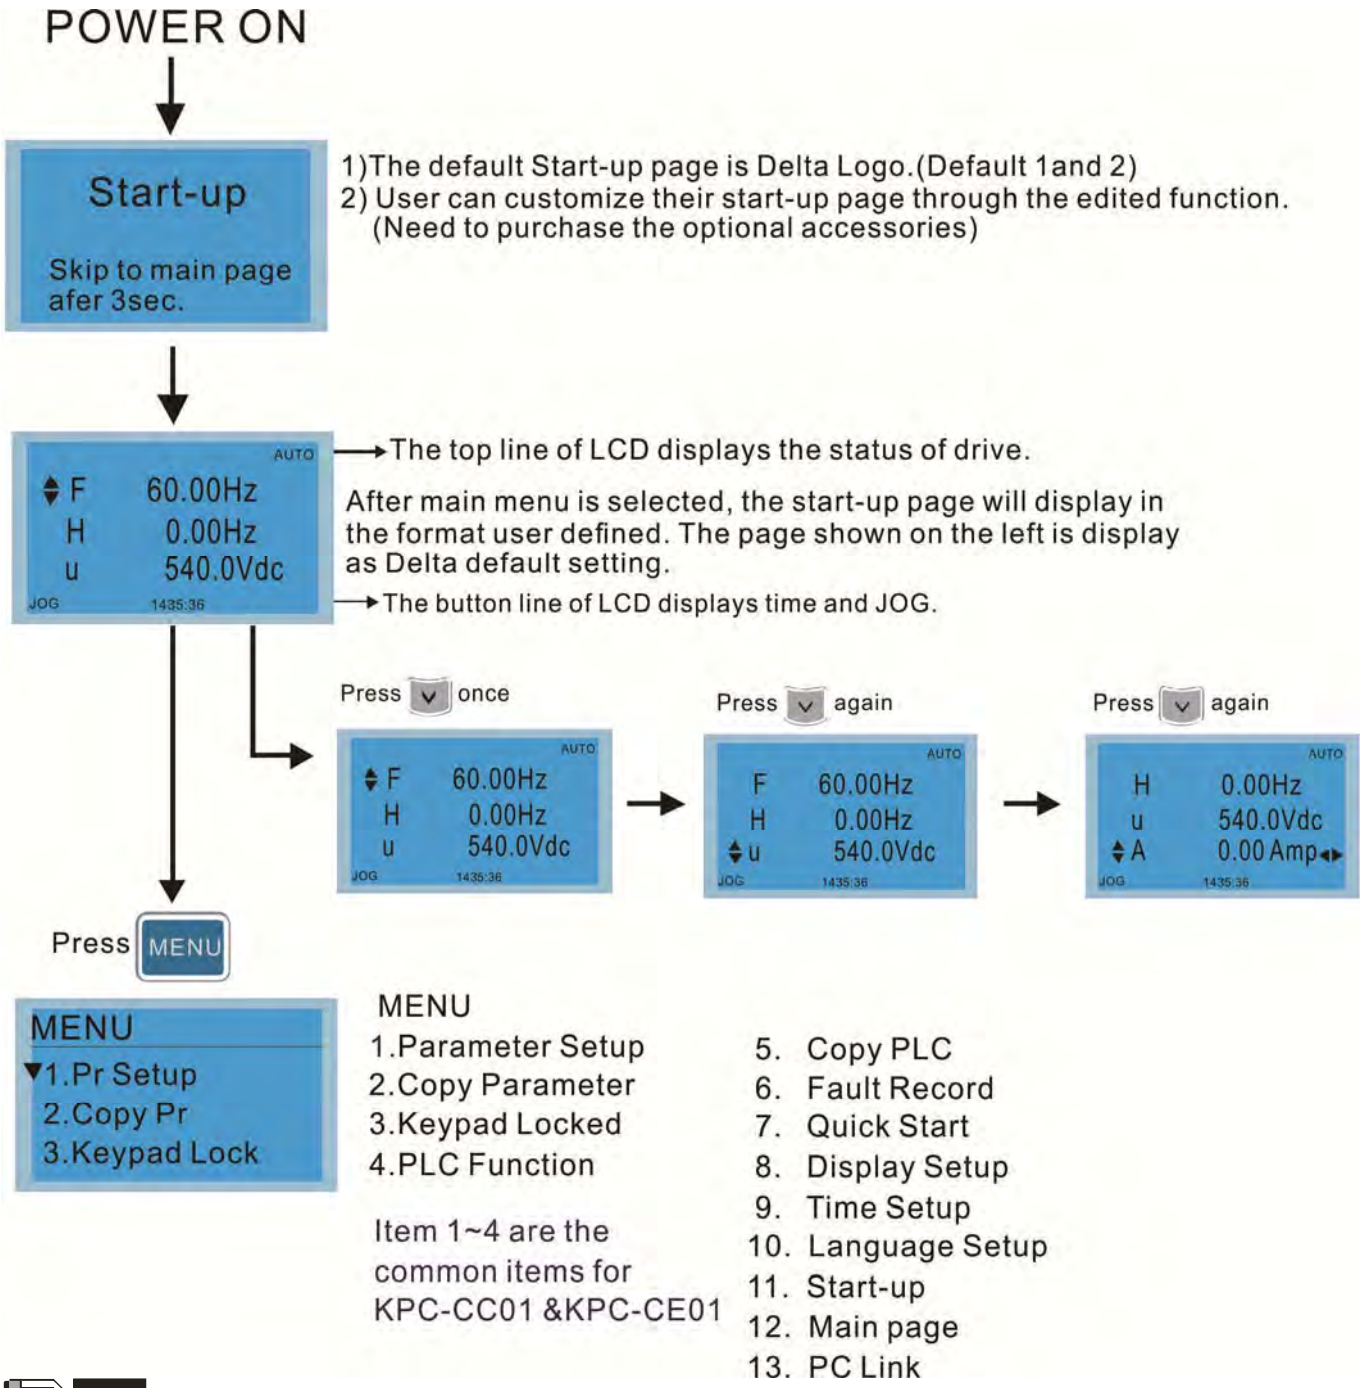
Function of Buttons

Button	Description
RUN	Start Operation Key 1. It is only valid when the source of operation command is from the keypad. 2. It can operate the AC motor drive by the function setting and the RUN LED will be ON. 3. It can be pressed repeatedly while the motor drive is shutting down..
STOP RESET	Stop Command Key. This key has the highest processing priority in any situation. 1. When it receives STOP command, no matter the AC motor drive is in operation or stop status, the AC motor drive needs to execute "STOP" command. 2. The RESET key can be used to reset the drive after the fault occurs. For those faults that can't be reset by the RESET key, see the fault records after pressing MENU key for details.
FWD REV	Operation Direction Key 1. This key is only control the operation direction NOT for activate the drive. FWD: forward, REV: reverse. 2. Refer to the LED descriptions for more details.
ENTER	ENTER Key Press ENTER and go to the next level. If it is the last level then press ENTER to execute the command
ESC	ESCAPE Key ESC key function is to leave current menu and return to the last menu. It is also functioned as a return key in the sub-menu.
MENU	Press menu to return to main menu.
< > ^ v	Direction: Left/Right/Up/Down 1. In the numeric value setting mode, it is used to move the cursor and change the numeric value. 2. In the menu/text selection mode, it is used for item selection.

Description of LED Functions

LED	Description
	Steady ON: operation indicator of the AC motor drive, including DC brake, zero speed, standby, restart after fault and speed search. Blinking: drive is decelerating to stop or in the status of base block. Steady OFF: drive doesn't execute the operation command
	Steady ON: stop indicator of the AC motor drive. Blinking: drive is in the standby status. Steady OFF: drive doesn't execute "STOP" command.
	Operation Direction LED 1. Green light is on, the drive is running forward. 2. Red light is on, the drive is running backward. 3. Twinkling light: the drive is changing direction.

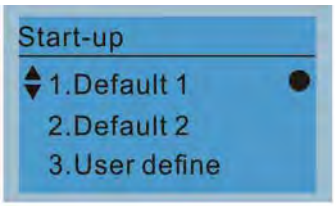
9-4 Function of Digital Keypad KPC-CC01



NOTE

1. Startup page can only display pictures, no flash.
2. When Power ON, it will display startup page then the main page. The main page displays Delta's default setting F/H/A/U, the display order can be set by Pr.00.03 (Startup display). When the selected item is U page, use left key and right key to switch between the items, the display order of U page is set by Pr.00.04 (User display).
3. **VFD-ED doesn't support Function 3, 4 and 5.**

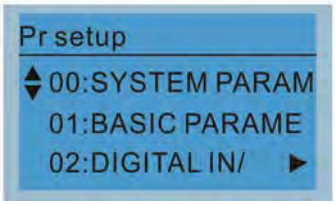
Display Icon



● : present setting

▲▼ : roll down the page for more options

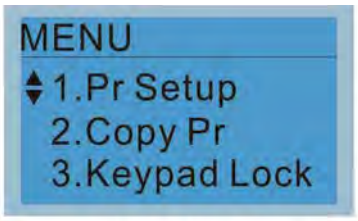
Press ^ v for more options.



▶ : show complete sentence

Press < > for complete information

Display Item

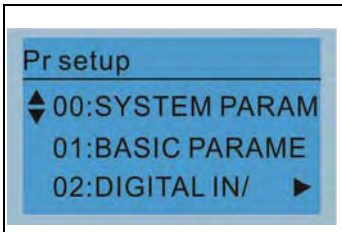


MENU
1.Parameter Setup
2.Copy Parameter
3.Keypad Locked
4.PLC Function

Item 1~4 are the common items for KPC-CC01 &KPC-CE01

5. Copy PLC
6. Fault Record
7. Quick Start
8. Display Setup
9. Time Setup
10. Language Setup
11. Start-up
12. Main page
13. PC Link

1. Parameter Setup

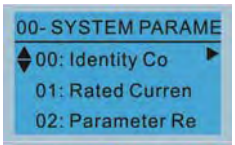


Press ENTER to select.

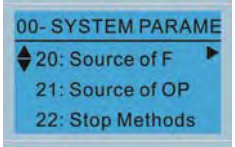
Press ^ v to select a parameter group.

Once a parameter group is selected, press ENTER to go into that group.

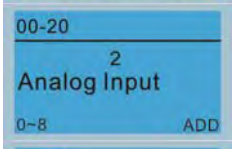
For example: Setup source of master frequency command.



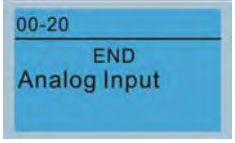
Once in the Group 00 Motor Drive Parameter, Use Up/Down key to select parameter 20: Auto Frequency Command.



When this parameter is selected, press ENTER key to go to this parameter's setting menu.

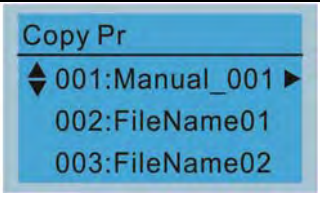


Use Up/Down key to choose a setting.
For example: Choose "2 Analogue Input, then press the ENTER key.



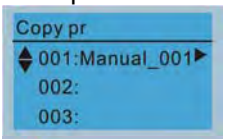
After pressing the ENTER key, an END will be displayed which means that the parameter setting is done.

2. Copy Parameter

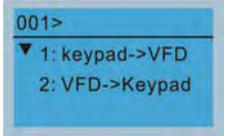


Press ENTER key to go to 001~004: content storage

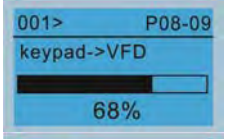
4 duplicates are provided
The steps are shown in the example below.
Example: Saved in the motor drive.



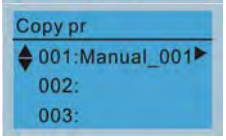
1 Go to Copy Parameter
2 Select the parameter group which needs to be copied and press ENTER key.



1 Select 1: Save in the motor drive.
2. Press ENTER key to go to “Save in the motor drive” screen.

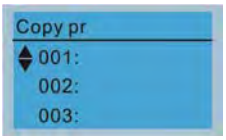


Begin to copy parameters until it is done.

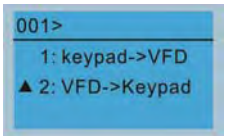


Once copying parameters is done, keypad will automatically be back to this screen.

Example: Saved in the keypad.



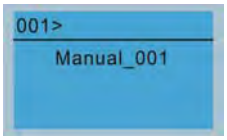
1. Once copying parameters is done, keypad will automatically be back to this screen.
2. Select the parameter group which needs to be copied and press ENTER key.



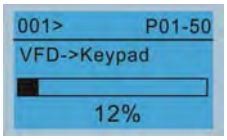
Press ENTER key to go to “Save in the motor drive” screen.

Use Up/Down key to select a symbol.
Use Left/Right key to move the cursor to select a file name.

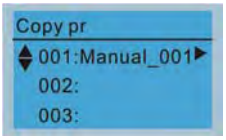
String & Symbol Table:
！” ＃＄％＆’ （）＊＋，－・／０１２３４５６７８９：；＜＝＞？＠ＡＢＣＤＥＦＧＨＩＪＫＬＭＮＯＰＱＲＳＴＵＶＷＸＹＺ〔＼〕＾＿ ‘ａｂｃｄｆｇｈｉｊｋｌｍｎｏｐｑｒｓｔｕｖｗｘｙｚ｛｜｝～



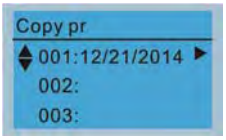
Once the file name is confirmed, press ENTER key.



To begin copying parameters until it is done.



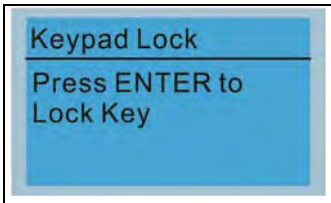
When copying parameters is completed, keypad will automatically be back to this screen.



Press Right key to see the date of copying parameters.

		Press Right key to see the time of copying parameters.

3. Lock the Keypad

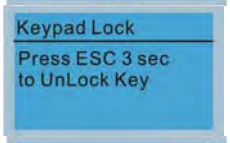


Press ENTER to lock

Keypad Locked

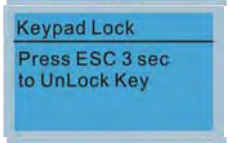
This function is used to lock the keypad. The main page would not display "keypad locked" when the keypad is locked, however it will display the message"please press ESC and then ENTER to unlock the keypad" when any key is pressed.

When the keypad is locked, the main screen doesn't display any status to show that.



Press any key on the keypad; a screen as shown in image on the left will be displayed.

If ESC key is not pressed, the keypad will automatically be back to this screen.



The keypad is still locked at this moment. By pressing any key, a screen as shown in the image on the left will still be displayed.

Press ESC for 3 seconds to unlock the keypad and the keypad will be back to this screen. Then each key on the keypad is functional.

Turn off the power and turn on the power again will not lock keypad.

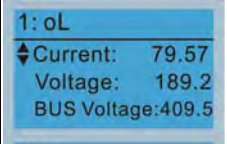
4. Fault Record

Press ENTER to select.

KPC-CE01 does not support this function.

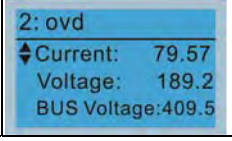
Able to store 6 error code (Keypad V1.02 and previous versions)
Able to store 20 error code(Keypad V1.0e3 and previous version)
The most recent error record is shown as the first record. Select an error record to see its detail such as date, tme, frequency, current, voltage, DCBUs voltage)

Press Up/Down key to select an error record.
After selecting an error code, press ENTER to see that error record's detail



Press Up/Down key to see an error record's detail such as date, time, frequency, current, voltage, DCBus voltage.

Press Up/Down key to select an error record.
After selecting an error code, press ENTER to see that error record's detail



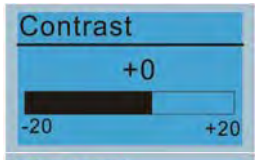
Press Up/Down key to see an error record's detail such as date, time, frequency, current, voltage, DCBus voltage.

	 **NOTE** Fault actions of AC motor drive are record and save to KPC-CC01. When KPC-CC01 is removed and apply to another AC motor drive, the previous fault records will not be deleted. The new fault records of the present AC motor drive will accumulate to KPC-CC01.

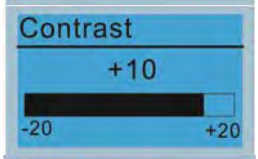
5. Display Setup

Press ENTER to setting menu.

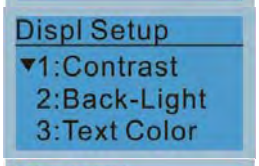
1. Contrast



Use Up/Down key to adjust the setting value.

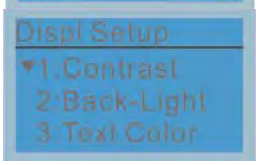


After selecting a setting value. Press ENTER to see screen's display after contrast is adjusted to be +10.



When the setting value is 0 Min, the back light will be steady on.

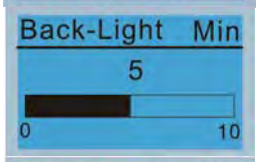
Then press ENTER.



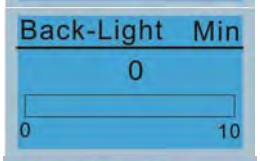
After select a setting value Press ENTER to see screen's display result after contrast is adjusted to be -10.

2. Back-light

Press ENTER to go to Back Light Time Setting screnn.



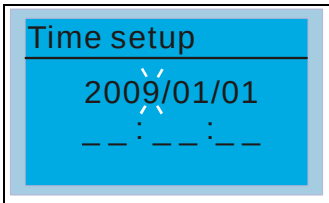
Use Up/Down key to adjust the setting value.



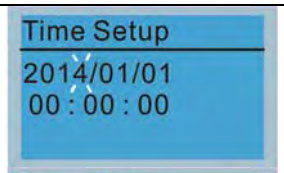
When the setting value is 0 Min, the back light will be steady on.

When the setting value is 10 Min, the backlight will be off in 10 minutes.

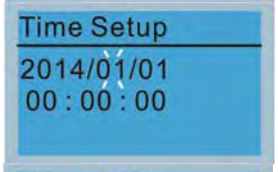
6. Time Setting



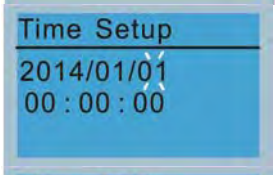
Use Left/Right key to select Year, Month, Day, Hour, Minute or Second to set up



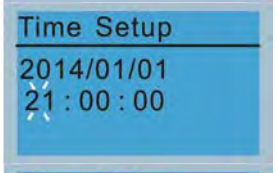
Use Up/Down key to set up Year



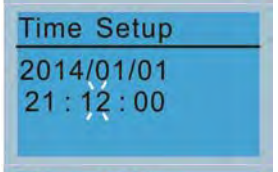
Use Up/Down key to set up Month



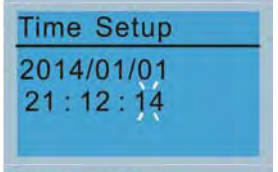
Use Up/Down key to set up day



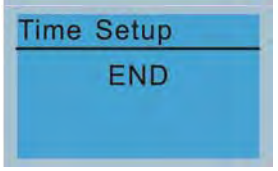
Use Up/Down key to set up hour



Use Up/Down key to set up Minute



Use Up/Down key to set up Second



After setting up, press ENTER to confirm the setup.

NOTE

When the digital keypad is removed, the time setting will be in standby status for 7 days. After this period, the time needs to be reset.

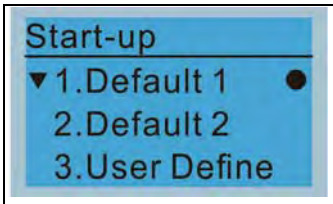
7. Language setup

Use Up/Down key to select language, than press ENTER.

Language setting option is displayed in the language of the user's choice.
Language setting options:

1. English
2. 繁體中文
3. 简体中文
4. Turkce
5.
6. Espanol
7. Portugues

8. Startup



1. Default 1 DELTA LOGO

2. Default 2 DELTA Text

3. User Defined: optional accessory is require (TPEditor & USB/RS-485 Communication Interface-IFD6530)

Install an editing accessory would allow users to design their own start-up page.If editor accessory is not installed, “user defined” option will dispay a blank page.

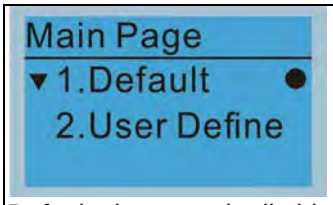
USB/RS-485 Communication Interface-IFD6530

Please refer to Chapter 07 Optional Acessories for more detail.

TPEditor

Go to Delta’s website to download TPEditor V1.30.6 or later versions.
http://www.delta.com.tw/ch/product/em/download/download_main.asp?act=3&pid=1&cid=1&tpid=3

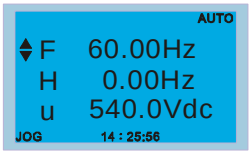
9. Mian Pge



Default picture and editable picture are available upon selection.

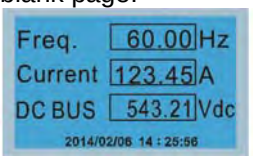
Press ENTER to select.

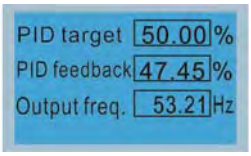
1. Default page



F 600.00Hz >>> H >>> A >>> U (circulate)

2. User Defined: optional accessory is require (TPEditor & USB/RS-485 Communication Interface-IFD6530)
   Install an editing accessory would allow users to design their own start-up page.If editor accessory is not installed, “user defined” option will dispay a blank page.





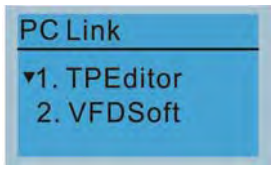
USB/RS-485 Communication Interface-IFD6530

Please refer to Chapter 07 Optional Acessories for more detail.

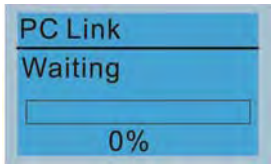
TPEditor

Go to Delta’s website to download TPEditor V1.30.6 or later versions. http://www.delta.com.tw/ch/product/em/download/download_main.asp?act=3&pid=1&cid=1&tpid=3

10. PC Link

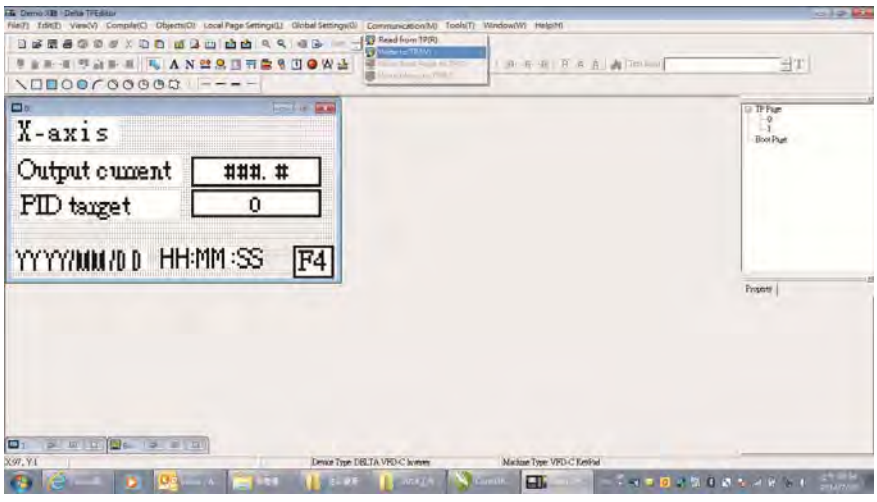


1. TPEditor: This function allows users to connect the keypad to a computer then to download and edit user defined pages.

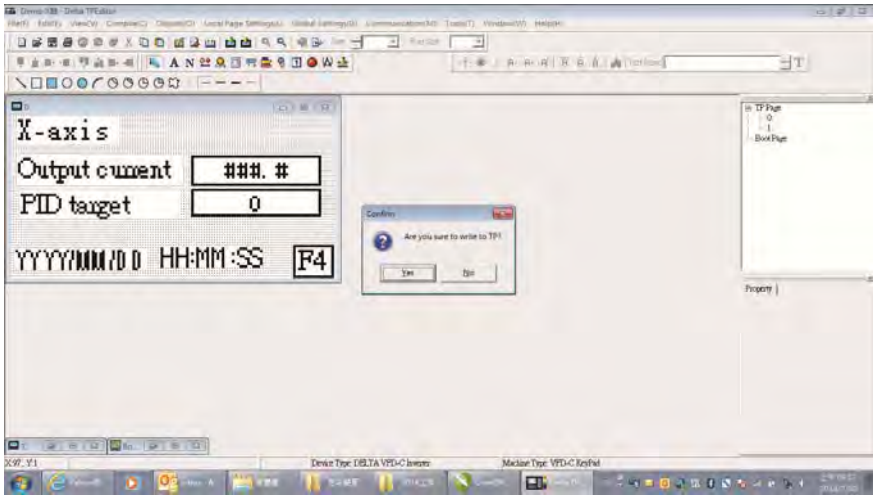


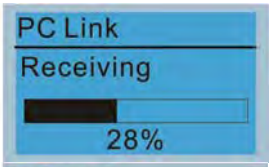
Click ENTER to go to <Waiting to connect to PC>

In TPEditor, choose <Communication>, then choose “Write to HMI”

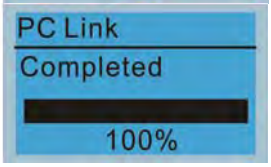


Choose <YES> in the <Confirm to Write> dialogue box.





Start downloading pages to edit KPC-CC01.

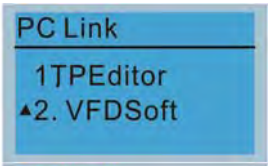


Download completed

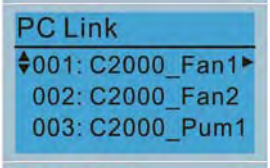
2. VFDSoft: this function allows user to link to the VFDSoft Operating software then to upload data

Copy parameter 1~4 in KPC-CC01

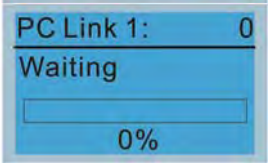
Connect KPC-CCO1 to a computer



Start downloading pages to edit to KPC-CC01

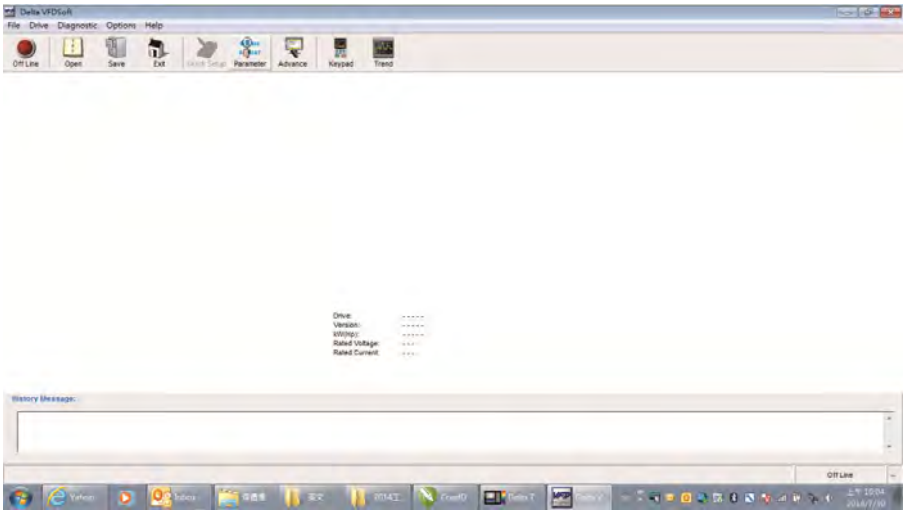


Use Up/Down key to select a parameter group to upload to VFDSoft.
Press ENTER

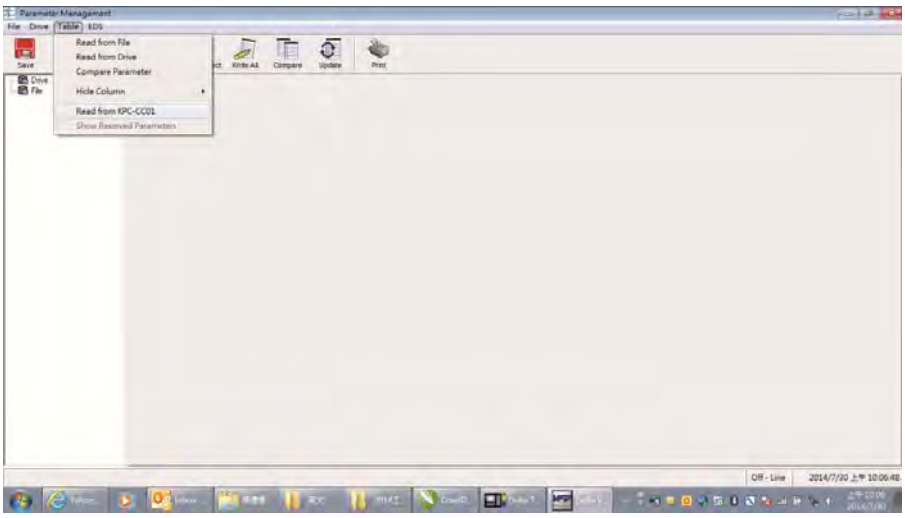


Waiting to connect to PC

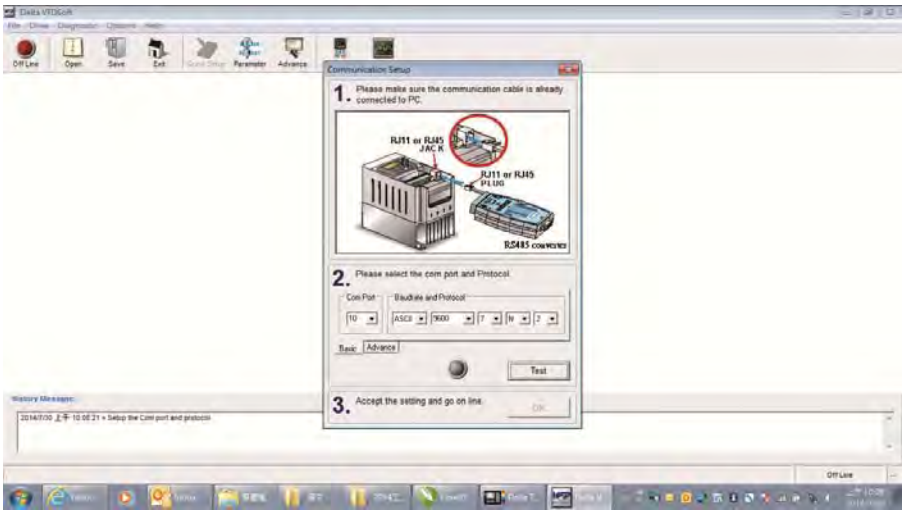
Open VFDSoft, choose <Parameter Manager function>

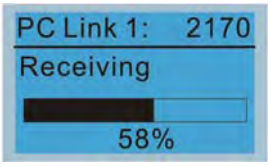


In Parameter Manager, choose <Load parameter table from KPC-CC01>



Choose the right communication port and click OK



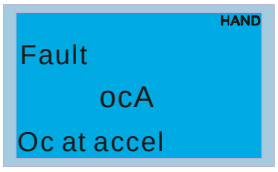


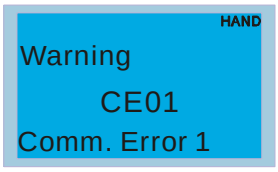
Start to upload parameters to VFDSoft

	 Uploading parameter is completed Before using the user defined starting screen and user defined main screen, the starting screen setup and the main screen setup have to be preset as user defined. If the user defined page are not downloaded to KPC-CC01, the starting screen and the main screen will be blank.

Other Display

When fault occur, the menu will display:





1. Press ENTER and start RESET. If still no response, please contact local distributor or return to the factory. To view the fault DC BUS voltage, output current and output voltage, press “MENU”→“Fault Record”.
2. Press ENTER again, if the screen returns to main page, the fault is clear.
3. When fault or warning message appears, backlight LED will blinks until the fault or the warning is cleared.

Optional accessory: RJ45 Extension Lead for Digital Keypad

Part No.	Description
CBC-K3FT	RJ45 extension lead, 3 feet (approximately 0.9m)
CBC-K5FT	RJ45 extension lead, 5 feet (approximately 1.5 m)
CBC-K7FT	RJ45 extension lead, 7 feet (approximately 2.1 m)
CBC-K10FT	RJ45 extension lead, 10 feet (approximately 3 m)
CBC-K16FT	RJ45 extension lead, 16 feet (approximately 4.9 m)

Note: When you need to buy communication cables, buy non-shielded , 24 AWG, 4 twisted pair, 100 ohms communication cables.

9-5 Digital Keypad KPC-CC01 Fault Codes and Descriptions

Fualt Codes:

LCM Display *	Description	Corrective Actions
	Keypad flash memory read error	An error has occurred on keypad's flash memory. 1. Press RESET on the keypad to clear errors. 2. Verify what kind of error has occurred on keypad's flash memory. 3. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your authorized local dealer.
	Keypad flash memory save error	An error has occurred on keypad's flash memory. 1. Press RESET on the keypad to clear errors. 2. Press RESET on the keypad to clear errors. 3. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your authorized local dealer.
	Keypad flash memory parameter error	Errors occurred on parameters of factory setting. It might be caused by firmware update. 1. Press RESET on the keypad to clear errors. 2. Verify if there's any problem on Flash IC. 3. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your local authorized dealer.
	Keypad flash memory when read AC drive data error	Keypad can't read any data sent from VFD. 1. Verify if the keypad is properly connect to the motor drive by a communication cable such as RJ-45. 2. Press RESET on the keypad to clear errors. 3. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your local authorized dealer.
	and then power on again the system.	A Serious error has occurred on keypad's CPU. 1. Verify if there's any problems on CPU clock? 2. Verify if there's any problem on Flash IC? 3. Verify if there's any problem on RTC IC? 4. Verify if the communication quality of the RS485 is good? 5. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your local authorized dealer.

Warning Codes:

LCM Display *	Description	Corrective Actions
	Modbus function code error	Motor drive doesn't accept the communication command sent from keypad. 1. Verify if the keypad is properly connected to the motor drive on the communication contact by a communication cable such as RJ-45. 2. Press RESET on the keypad to clear errors. If none of the solution above works, contact your local authorized dealer.
	Modbus data address error	Motor rive doesn't accept keypad's communication address. 1. Verify if the keypad is properly connected to the motor drive on the communication contact by a communication cable such as RJ-45. 2. Press RESET on the keypad to clear errors. If none of the solution above works, contact your local authorized dealer.
	Modbus data value error	Motor drive doesn't accept the communication data sent from keypad. 1. Verify if the keypad is properly connected to the motor drive on the communication contact by a communication cable such as RJ-45. 2. Press RESET on the keypad to clear errors. If none of the solution above works, contact your local authorized dealer.
	Modbus slave drive error	Motor drive cannot process the communication command sent from keypad. 1. Verify if the keypad is properly connected to the motor drive on the communication contact by a communication cable such as RJ-45. 2. Press RESET on the keypad to clear errors. 3. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your local authorized dealer.
	Modbus transmission time-Out	Motor drive doesn't respond to the communication command sent from keypad. 1. Verify if the keypad is properly connected to the motor drive on the communication contact by a communication cable such as RJ-45. 2. Press RESET on the keypad to clear errors. 3. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your local authorized dealer.
	Object not supported by TP Editor	Keypad's TP Editor uses unsupported object. 1. Verify how the TP editor should use that object. Delete unsupported object and unsupported setting. 2. Reedit the TP editor and then download it. If none of the solution above works, contact your local authorized dealer.

File Copy Setting Fault Description

LCM Display *	Description	Corrective Actions
	Parameter and rile are read only	The property of the parameter/file is read-only and cannot be written to. 1. Verify the specification on the user manual. If the solution above doesn't work, contact your local authorized dealer.
	Fail to write parameter and file	An error occurred while write to a parameter/file. 1. Verify if there's any problem on the Flash IC. 2. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above work, contact your local authorized dealer.
	AC drive is in operating status	A setting cannot be made while motor drive is in operation. 1. Verify if the drive is not in operation. If the solution above doesn't work, contact your local authorized dealer.
	AC drive parameter is locked	A setting cannot be made because a parameter is locked. 1. Verify if the parameter is locked or not. If it is locked, unlock it and try to set up the parameter again. If the solution above doesn't work, contact your local authorized dealer.
	AC drive parameter changing	A setting cannot be made because a parameter is being modified. 1. Verify if the parameter is being modified. If it is not being modified, try to set up that parameter again. If the solution above doesn't work, contact your local authorized dealer.
	Fault code	A setting cannot be made because an error has occurred on the motor drive. 1. Verify if there's any error occurred on the motor dive. If there isn't any error, try to make the setting again. If the solution above doesn't work, contact your local authorized dealer.
	Warning code	A setting cannot be made because of a warning message given to the motor drive. 1. Verify if there's any warning message given to the motor drive. If the solution above doesn't work, contact your local authorized dealer.
	File type dismatch	Data need to be copied are not same type, so the setting cannot be made. 1. Verify if the products' serial numbers need to be copied fall in the category. If they are in the same category, try to make the setting again. If the solution above doesn't work, contact your authorized dealer.
	File is locked with password	A setting cannot be made, because some data are locked. 1. Verify if the data are unlocked or able to be unlocked. If the data are unlocked, try to make the setting again. 2. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your local authorized dealer.

LCM Display *	Description	Corrective Actions
	File version dismatch	A setting cannot be made because the password is incorrect. 1. Verify if the password is correct. If the password is correct, try to make the setting again. 2. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your local authorized dealer.
	AC drive copy function time-out	A setting cannot be made, because the version of the data is incorrect. 1. Verify if the version of the data matches the motor drive. If it matches, try to make the setting again. If none of the solution above works, contact your local authorized dealer.
	Other keypad error	A setting cannot be made, because data copying timeout expired. 1. Redo data copying. 2. Verify if copying data is authorized. If it is authorized, try again to copy data. 3. Shut down the system, wait for ten minutes, and then power on again the system. If none of the solution above works, contact your local authorized dealer.
	Other AC drive error	This setting cannot be made, due to other keypad issues. (Reserved functions) If such error occurred, contact your local authorized dealer.
	File is locked with password	This setting cannot be made, due to other motor drive issues. (Reserved functions). If such error occurred, conatct your local authorized dealer.

※ The content in this chapter only applies on V1.01 and above of KPC-CC01 keypad.

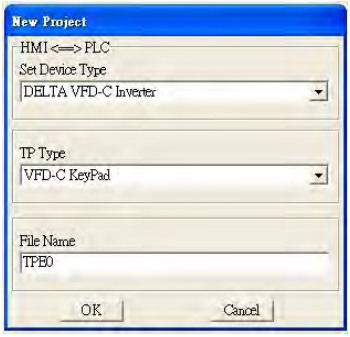
9-6 TPEditor Installation

TPEditor can edit up to 256 HMI (Human-Machine Interface) pages with a total storage capacity of 256kb. Each page can edit 50 normal objects and 10 communication objects.

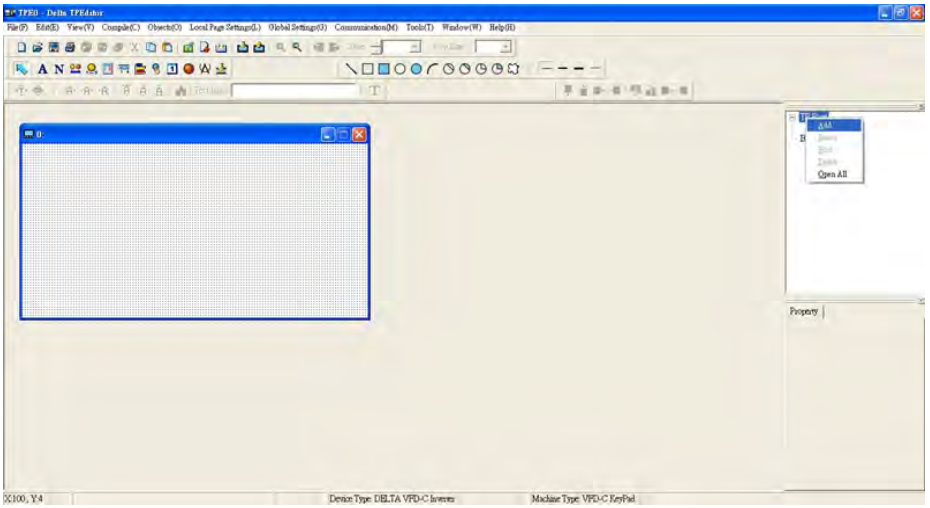
1) TPEditor: Setup & Basic Functions

1. Run TPEditor version 1.60 or later.

2. Go to File(F)→Click on New. The Window below will pop up. At the device type, click on the drop down menu and choose DELTA VFD-C Inverter. At the TP type, click on the drop down menu and choose VFD-C KeyPad. As for File Name, enter TPE0. Now click on OK.

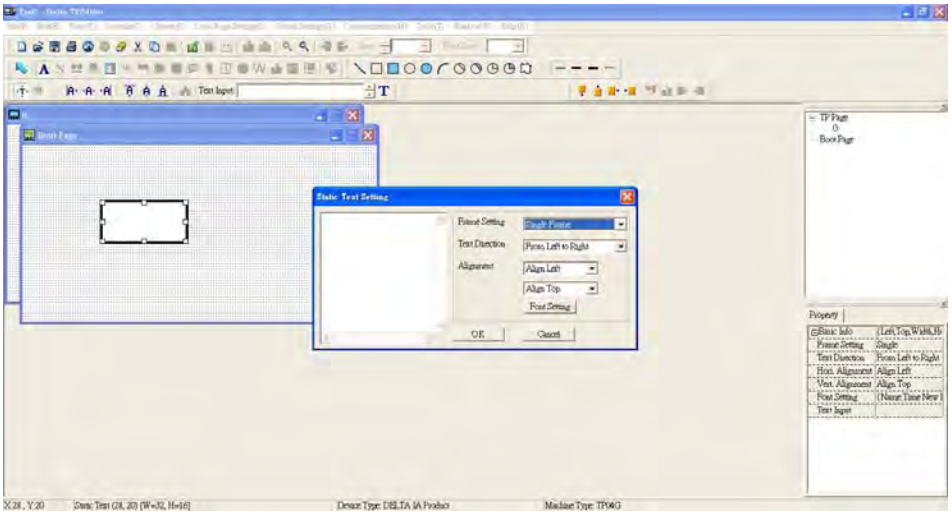


3. You are now at the designing page. Go to Edit (E)→Click on Add a New Page (A) or go to the TP page on the upper right side, right click once on TP page and choose Add to increase one more page for editing. The current firmware of Keypad is version1.00 and can support up to 4 pages.

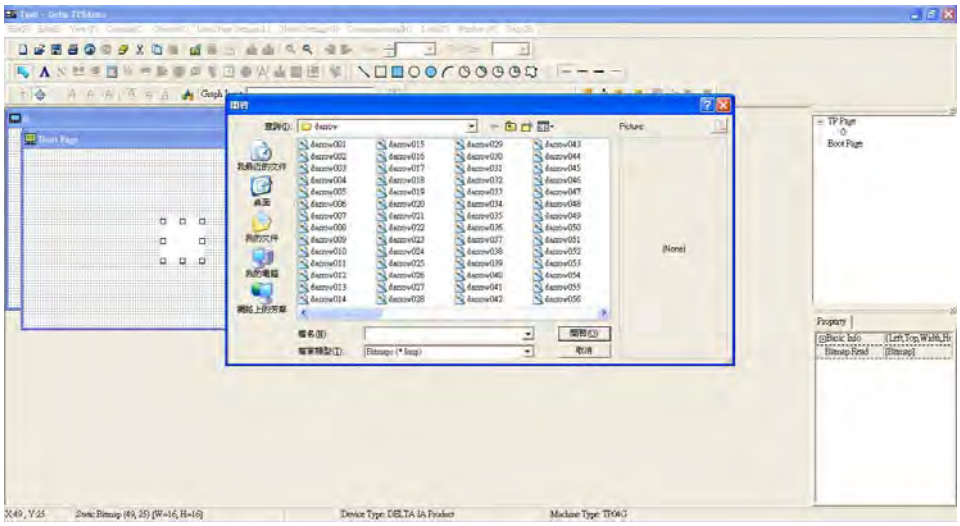


4. Edit Startup Page

5. Static Text  . Open a blank page, click once on this button  , and then double click on that blank page. The following windows will pop up.



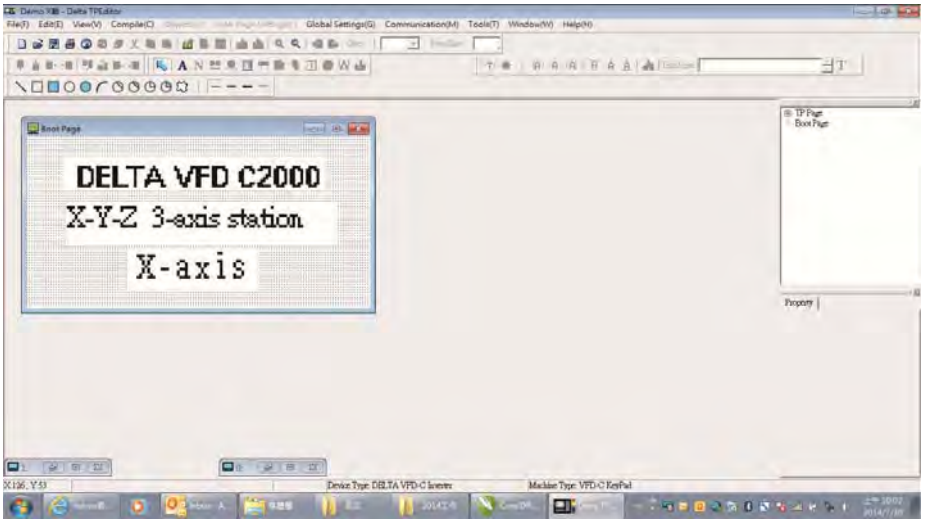
6. Static Bitmap  →Open a blank page, then click once on this button  and then double click on that blank page. The following window will pop up.



Please note that Static Bitmap setting support only images in BMP format. Now choose a image that you need and click open, then that image will appear in the Static Bitmap window.

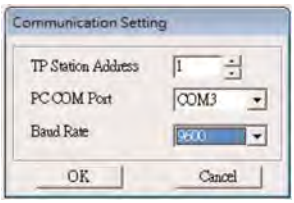
7. Geometric Bitmap  → As shown in the picture on the left side, there are 11 kinds of geometric bitmap to choose. Open a new blank page then click once on a geometric bitmap icon that you need. Then drag that icon and enlarge it to the size that you need on that blank page.

8. Finish editing the keypad starting screen and select **Communication>Input User Defined Keypad Starting Screen.**

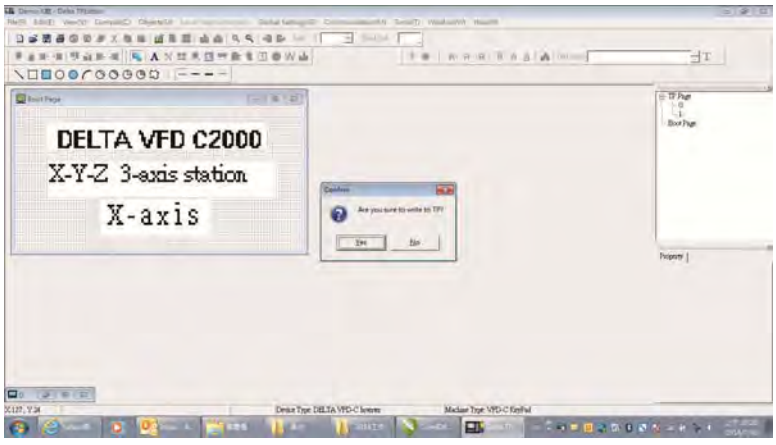


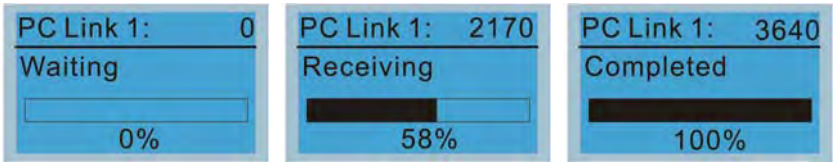
9. Downloading setting: Go to Tool > Communication. Set up communication port and speed of IFD6530.

10. Only three speed selections are available: 9600 bps, 19200 bps and 38400 bps.



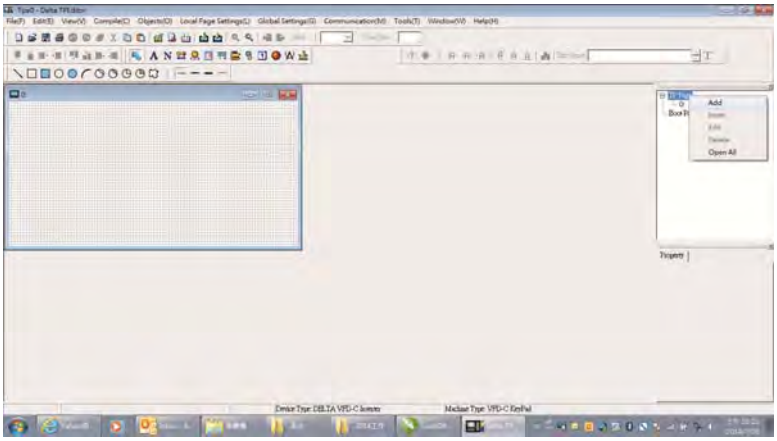
11. When a dialogue box displayed on the screen asking to confirm writing or not, press buttons on the keypad to go to MENU, select PC LINK and then press ENTER and wait for few seconds. Then select YES on the screen to start downloading.





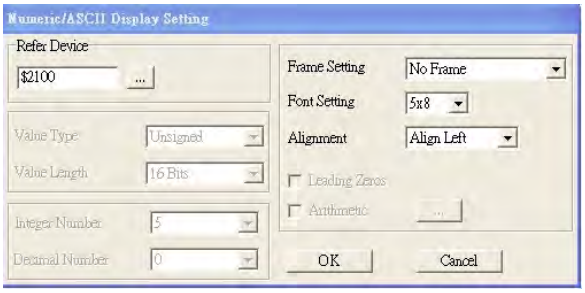
2) Edit Main Page & Example of Download

1. Go to editing page, select EditàAdd one page or press the button ADD on the right hand side of the HMI page to increase number of pages to edit. This keypad currently support up to 256 pages.



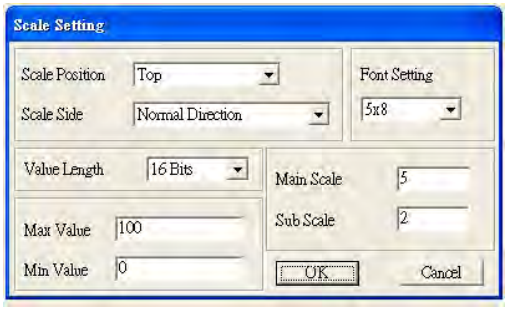
2. On the bottom right-hand corner of the HMI, click on a page number to edit or go to VIEW >HMI page to start editing main page. As shown in the image, the following objects are available. From left to right: Static Text, ASCII Display, Static Bitmap, Scale, Bar Graph, Button, Clock Display, Multi-state bit map, Units, Numeric Input and 11 geometric bitmaps and lines of different width. The application of Static Text, Static Bitmap, and geometric bitmap is the same as the editing startup page.

3. Numric/ASCII Display : To add a Numeric/ASCII Display object to a screen, double click on the object to set up Related Devices, Frame Setting , Fonts and Alignment.

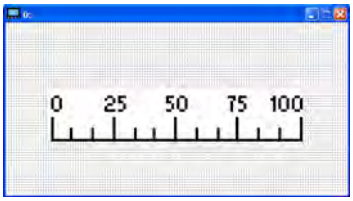


Related Device: Choose the VFD Communication Port that you need, if you want to read output frequency (H), set the VFD Communication Port to $2202. For other values, please refer to ACMD ModBus Comm Address List.

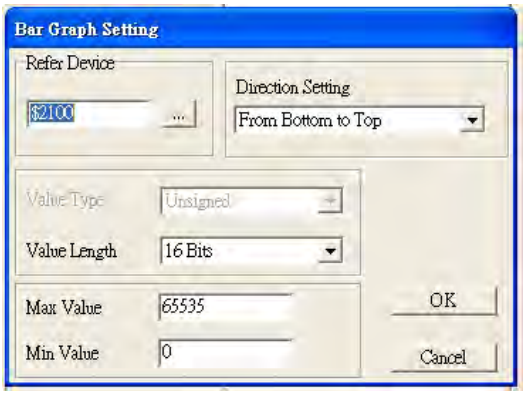
4. Scale Setting : On the Tool Bar, click on this for Scale Setting. You can also edit Scale Setting in the Property Window on the right hand side of your computer screen.



a. Scale Position: Click on the drop down list to choose which position that you need to place a scale.
b. Scale Side: Click on the drop down list to choose if you want to number your scale from smaller number to bigger number or from big to small. Click OK to accept this setting or click Cancel to abort.
c. Font Setting: Click on the drop down list to choose the Font setting that you need then click OK to accept the setting or click Cancel to abort.
d. Value Length: Click on the drop down to choose 16bits or 32 bits. Then click OK to accept the setting or click Cancel to abort.
e. Main Scale & Sub Scale: In order to divide the whole scale into equal parts, key in the numbers of your choices for main scale and sub scale.
f. Maximum value & Minimum Value are the numbers on the two ends of a scale. They can be negative numbers. But the values allowed to be input are limited by the length of value. For example, when the length of value is set to **be hexadecimal**, the maximum and the minimum value cannot be input as -4000.
Follow the Scale setting mentioned above; you will have a scale as shown below.



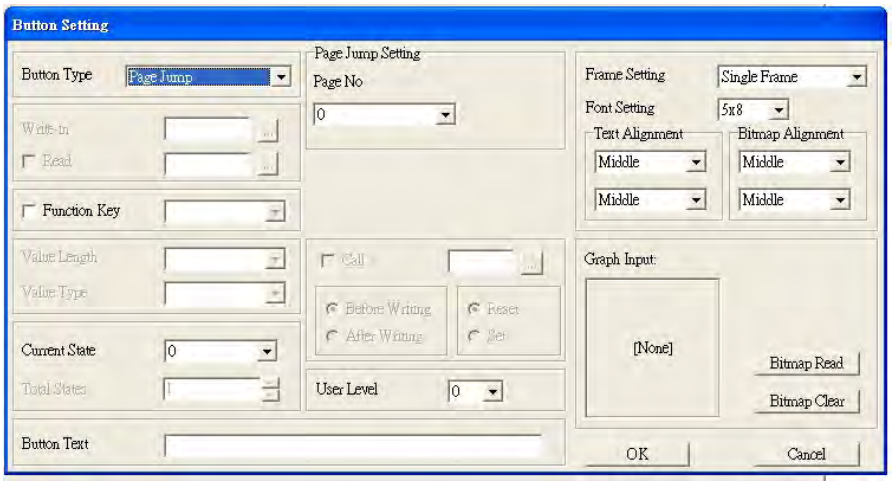
5. Bar Graph setting :



a. Related Device: Choose the VFD Communication Port that you need.
b. Direction Setting: Click on the drop down menu to choose one of the following directions: From Bottom to Top, From Top to Bottom, From Left to Right or From Right to Left.
c. Maximum Value & Minimum Value: They define the range covered by the maximum value and minimum value. If a value is smaller than or equal to the minimum value, then the bar graph will be blank. If a value is bigger or equal to the maximum value, then the bar graph will be full. If a value is between minimum and maximum value, then the bar graph will be filled proportionally.

6. Button : Currently this function only allows the Keypad to switch pages, other functions are not yet available. Text input function and Image inserted functions are not yet supported.

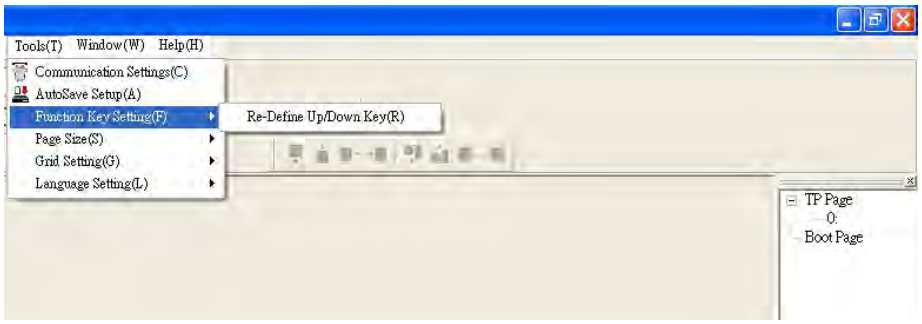
Double click on to open set up window.



<Button Type> allows users set up buttons' functions. <Page Jump> and <Constant Setting> are the only two currently supported functions.

A [Page Jump] function setting

- Page Jump setting: After you choose the Page Jump function in the drop down list, you will see this Page Jump Setting Menu
- <Function Key> allows you to assign functions to the following keys on the KPC-CC01 keypad: F1, F2, F3, F4, Up, Down, Left and Right. Please note that the Up and Down keys are locked by TPEditor. These two keys cannot be programmed. If you want to program Up and Down keys, go to Tool→Function Key Settings (F)→Re-Define Up/Down Key(R).

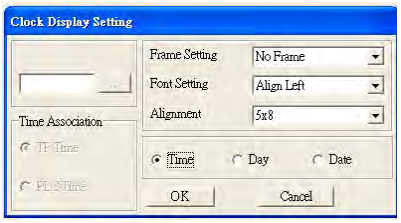


- Button Text: This function allows user to name buttons. For example, key in <Next Page> in the empty space, a button will have the wording <Next Page> displayed on it.

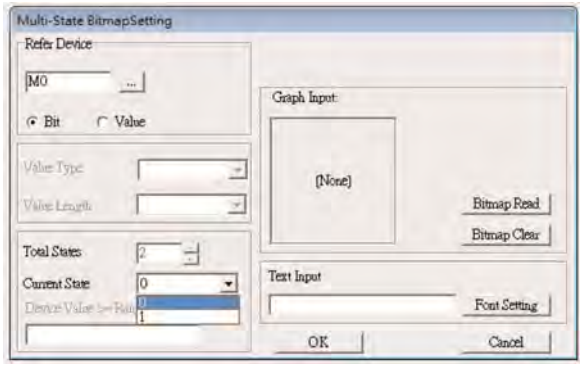
B [Constant setting] function

This function is to set up the memory address' value of the VFD or PLC. When pressing the <function button> set up in before, a value will be written to the memory address of the <Constant Setting>. This function can be used as initializing a variable.

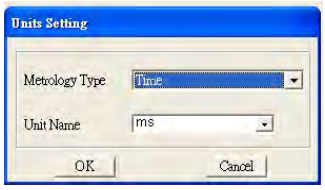
7. Clock Display Setting : The setup window of the Clock Display is shown as the image below. Time, Day or Date can be displayed on the keypad.
   Open a new file and click once in that window, you will see the following
   In the clock display setting, you can choose to display Time, Day or Date on the Keypad. To adjust time, go to #9 on the Keypad's menu. You can also adjust Frame Setting, Font Setting and Alignment.



8. Multi-state bitmap : The setup window of the multi-state is shown as the image below. This object reads the bit's property value of the PLC. It defines what image or wording is when this bit is 0 or when this bit is 1. Set the initial status to be 0 or 1 to define the displayed image or wording.



9. Unit Measurement : Click once on this Button:
   Open a new file and double click on that window, you will see the following

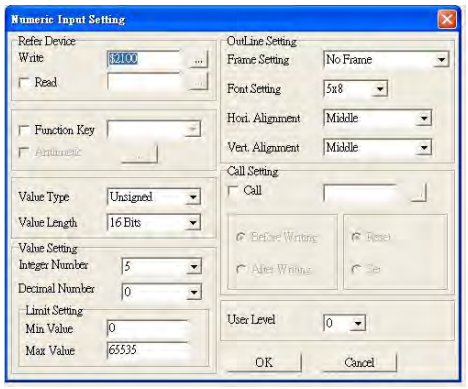


Choose from the drop down list the Metrology and the Unity Name that you need.
As for Metrology, you have the following choices Length, Square Measure, Volume/Solid Measure, Weight, Speed, Time and Temperature. The unit name changes automatically when you change metrology type.

10. Numeric Input Setting :

This menu allows you to provide parameters or communication ports and to input numbers.

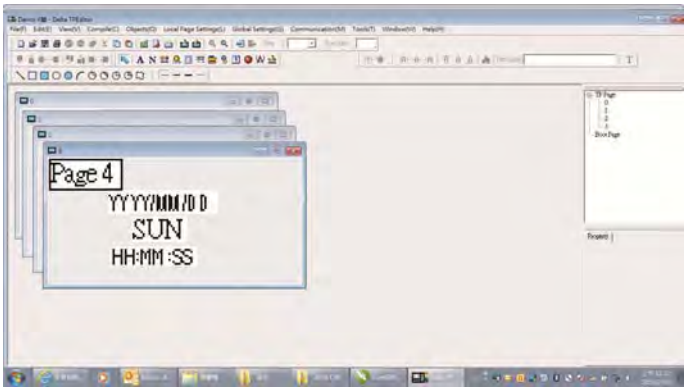
Click once on this button .
Open a new file and double click on that window, you will see the following:

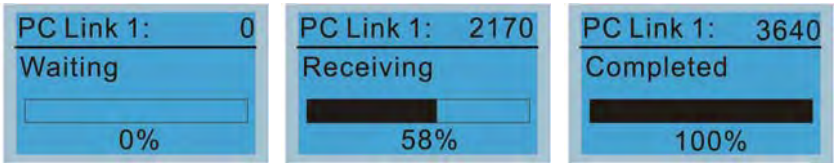


a. Related Device: There are two blank spaces to fill in, one is <Write> and another one is <Read>. Input the numbers that you want to display and the corresponding numbers of a parameter and that of a communication port. For example, input 012C to Read and Write Parameter P01-44.
b. OutLine Setting: The Frame setting, Font setting, Vertical Alignment and Horizontal Alignment are the same as mentioned before. Click on the drop down menu and choose the setting that you need.
c. Function key: The setting here allows you to program keys on the keypad. Press the key on the menu then the corresponding key on the keypad will start to blink, then press Enter to confirm the setting.
d. Value Type & Value Length: These two factors influence the range of the Minimum and Maximum Value of the Limit Setting. Please note that the corresponding supporting values for C2000 have to be 16bits. The 32bits values are not supported.
e. Value Setting: This part is set automatically by the keypad itself.
f. Limit Setting: Input the range the security setting here.
g. For example, if you set Function Key as F1, Minimum Value as 0 and Maximum Value ias 4, then press F1 on Keypad Then you can press Up and Down key on the keypad to increase or decrease the value. Press Enter Key on the keypad to confirm your setting. You can also go to parameter table 01-44 to verify if your input correctly the value.

11. Download TP Page : Press Up or Down key on the keypad until you reach #13 PC Link.
Then press Enter on the keypad and you will see the word “Waiting” on keypad’s screen. Now choose a page that you have created then go to Communication (M)→Write to TP(W) to start downloading the page to the keypad

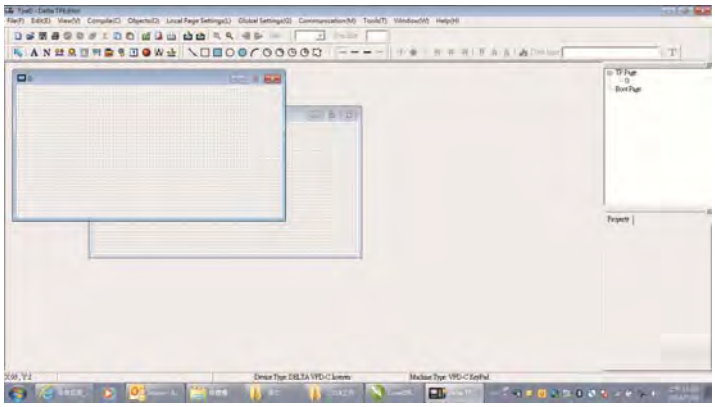
When you see the word Completed on the keypad’s screen, that means the download is done. Then you can press ESC on the keypad to go back to the menu of the keypad.



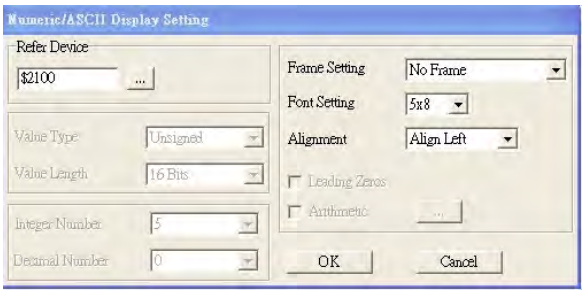


3) Edit Main Page

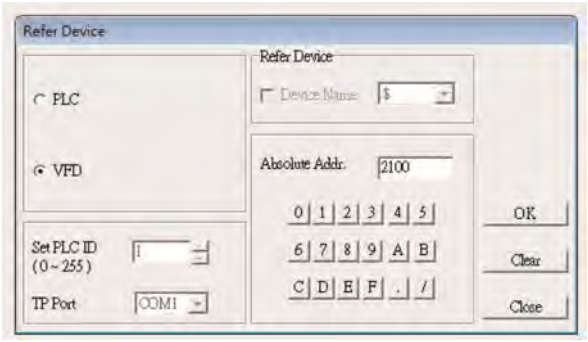
1. On the bottom right-hand corner of the HMI, click on a page number to edit or go to VIEW >HMI page to start editing main page. As shown in the image, the following objects are available. From left to right: Static Text, ASCII Display, Static Bitmap, Scale, Bar Graph, Button, Clock Display, Multi-state bit map, Units, Numeric Input and 11 geometric bitmaps and lines of different width. The application of Static Text, Static Bitmap, and geometric bitmap is the same as the editing startup page.



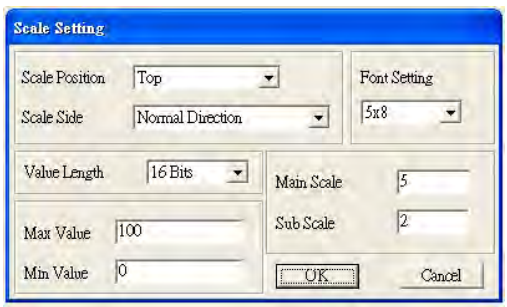
2. Numric/ASCII Display : To add a Numeric/ASCII Display object to a screen, double click on the object to set up Related Devices, Frame Setting , Fonts and Alignment.



Related Device: Choose the VFD Communication Port that you need, if you want to read output frequency (H), set the VFD Communication Port to $2202. For other values, please refer to ACMD ModBus Comm Address List.

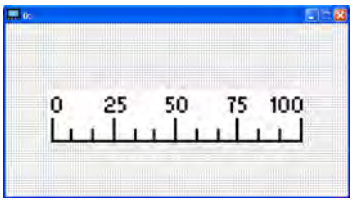


3. Scale Setting : On the Tool Bar, click on this for Scale Setting. You can also edit Scale Setting in the Property Window on the right hand side of your computer screen.

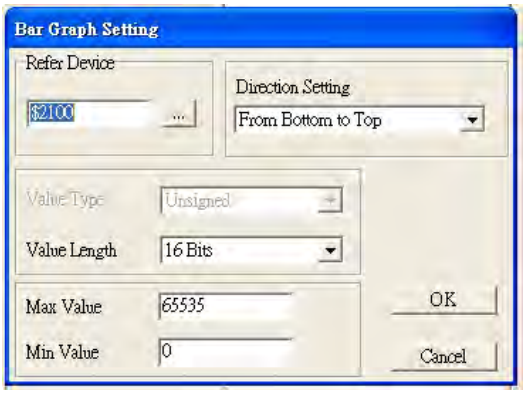


i. Scale Position: Click on the drop down list to choose which position that you need to place a scale.
ii. Scale Side: Click on the drop down list to choose if you want to number your scale from smaller number to bigger number or from big to small. Click OK to accept this setting or click Cancel to abort.
iii. Font Setting: Click on the drop down list to choose the Font setting that you need then click OK to accept the setting or click Cancel to abort.
iv. Value Length: Click on the drop down to choose 16bits or 32 bits. Then click OK to accept the setting or click Cancel to abort.
v. Main Scale & Sub Scale: In order to divide the whole scale into equal parts, key in the numbers of your choices for main scale and sub scale.
vi. Maximum value & Minimum Value are the numbers on the two ends of a scale. They can be negative numbers. But the values allowed to be input are limited by the length of value. For example, when the length of value is set to **be hexadecimal**, the maximum and the minimum value cannot be input as -4000.

Follow the Scale setting mentioned above; you will have a scale as shown below.



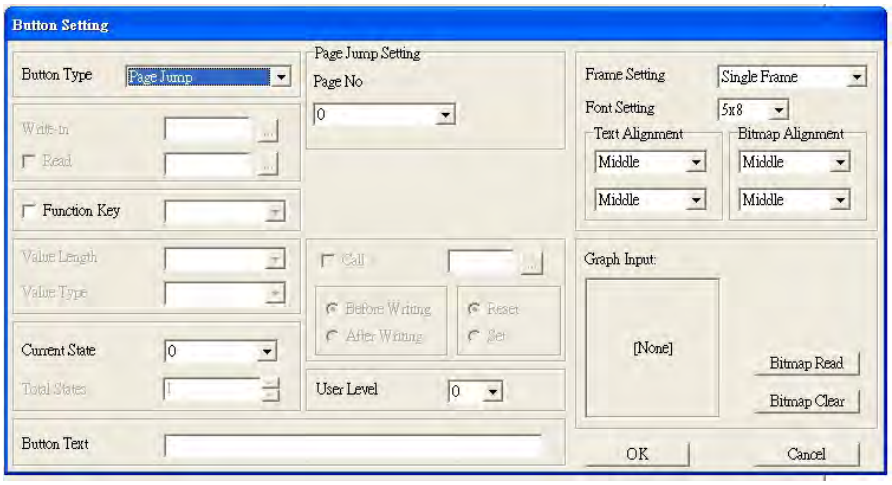
4. Bar Graph setting  :



i. Related Device: Choose the VFD Communication Port that you need.
ii. Direction Setting: Click on the drop down menu to choose one of the following directions: From Bottom to Top, From Top to Bottom, From Left to Right or From Right to Left.
iii. Maximum Value & Minimum Value: They define the range covered by the maximum value and minimum value. If a value is smaller than or equal to the minimum value, then the bar graph will be blank. If a value is bigger or equal to the maximum value, then the bar graph will be full. If a value is between minimum and maximum value, then the bar graph will be filled proportionally.

5. Button  : Currently this function only allows the Keypad to switch pages, other functions are not yet available. Text input function and Image inserted functions are not yet supported.

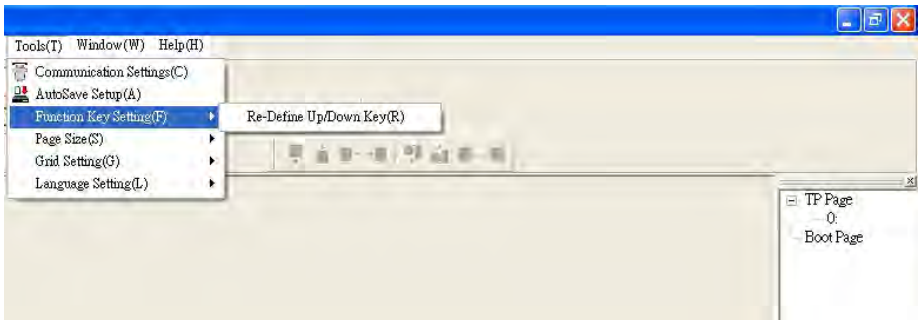
Double click on  to open set up window.



<Button Type> allows users set up buttons' functions. <Page Jump> and <Constant Setting> are the only two currently supported functions.

A [Page Jump] function setting

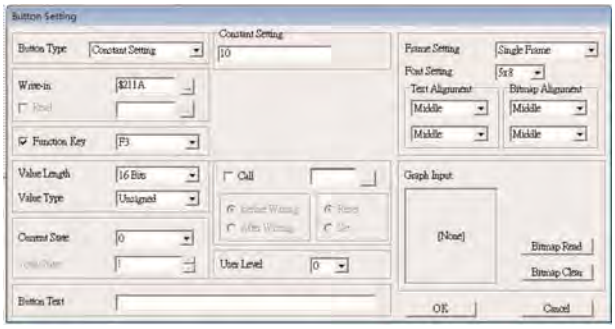
- Page Jump setting: After you choose the Page Jump function in the drop down list, you will see this Page Jump Setting Menu
- <Function Key> allows you to assign functions to the following keys on the KPC-CC01 keypad: F1, F2, F3, F4, Up, Down, Left and Right. Please note that the Up and Down keys are locked by TPEditor. These two keys cannot be programmed. If you want to program Up and Down keys, go to Tool→Function Key Settings (F)→Re-Define Up/Down Key(R).



- Button Text: This function allows user to name buttons. For example, key in <Next Page> in the empty space, a button will have the wording <Next Page> displayed on it.

B [Constant setting] function

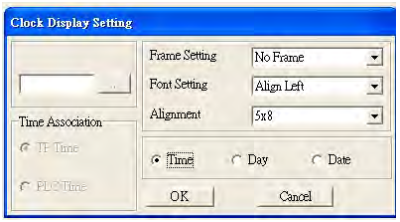
This function is to set up the memory address' value of the VFD or PLC. When pressing the <function button> set up in before, a value will be written to the memory address of the <Constant Setting>. This function can be used as initializing a variable.



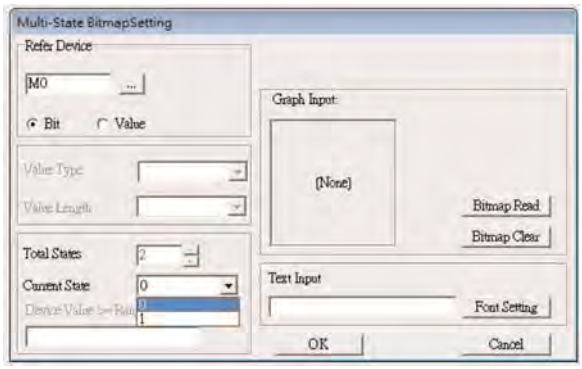
11. Clock Display Setting : The setup window of the Clock Display is shown as the image below. Time, Day or Date can be displayed on the keypad.

Open a new file and click once in that window, you will see the following

In the clock display setting, you can choose to display Time, Day or Date on the Keypad. To adjust time, go to #9 on the Keypad's menu. You can also adjust Frame Setting, Font Setting and Alignment.



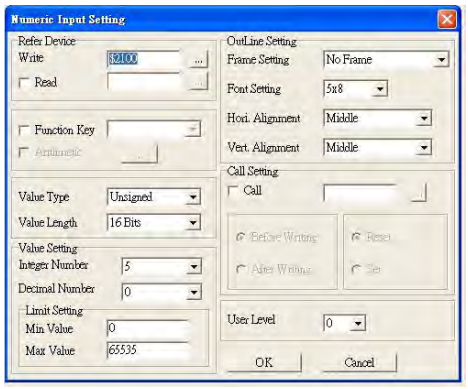
12. Multi-state bitmap : The setup window of the multi-state is shown as the image below. This object reads the bit's property value of the PLC. It defines what image or wording is when this bit is 0 or when this bit is 1. Set the initial status to be 0 or 1 to define the displayed image or wording.



13. Unit Measurement : Click once on this Button:
Open a new file and double click on that window, you will see the following

Choose from the drop down list the Metrology and the Unity Name that you need.
As for Metrology, you have the following choices Length, Square Measure, Volume/Solid Measure, Weight, Speed, Time and Temperature. The unit name changes automatically when you change metrology type.

14. Numeric Input Setting:
This menu allows you to provide parameters or communication ports and to input numbers.
Click once on this button .
Open a new file and double click on that window, you will see the following:

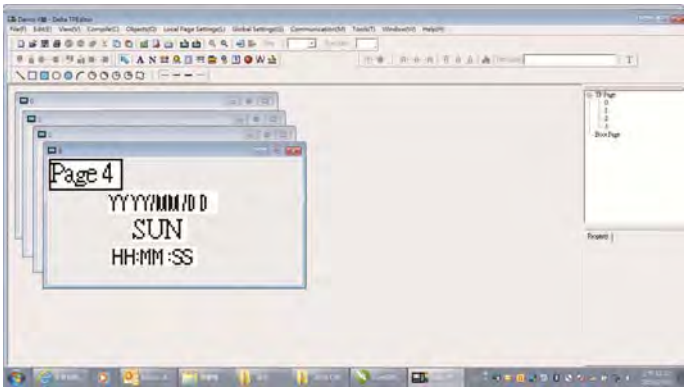


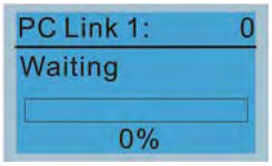
h. Related Device: There are two blank spaces to fill in, one is <Write> and another one is <Read>. Input the numbers that you want to display and the corresponding numbers of a parameter and that of a communication port. For example, input 012C to Read and Write Parameter P01-44.
i. OutLine Setting: The Frame setting, Font setting, Vertical Alignment and Horizontal Alignment are the same as mentioned before. Click on the drop down menu and choose the setting that you need.
j. Function key: The setting here allows you to program keys on the keypad. Press the key on the menu then the corresponding key on the keypad will start to blink, then press Enter to confirm the setting.
k. Value Type & Value Length: These two factors influence the range of the Minimum and Maximum Value of the Limit Setting. Please note that the corresponding supporting values for C2000 have to be 16bits. The 32bits values are not supported.
l. Value Setting: This part is set automatically by the keypad itself.

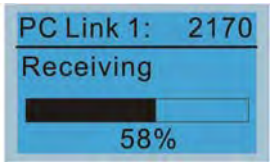
m. Limit Setting: Input the range the security setting here.

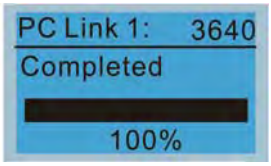
n. For example, if you set Function Key as F1, Minimum Value as 0 and Maximum Value ias 4, then press F1 on Keypad Then you can press Up and Down key on the keypad to increase or decrease the value. Press Enter Key on the keypad to confirm your setting. You can also go to parameter table 01-44 to verify if your input correctly the value.

15. Download TP Page : Press Up or Down key on the keypad until you reach #13 PC Link.
Then press Enter on the keypad and you will see the word “Waiting” on keypad’s screen. Now choose a page that you have created then go to Communication (M)→Write to TP(W) to start downloading the page to the keypad
When you see the word Completed on the keypad’s screen, that means the download is done.
Then you can press ESC on the keypad to go back to the menu of the keypad.



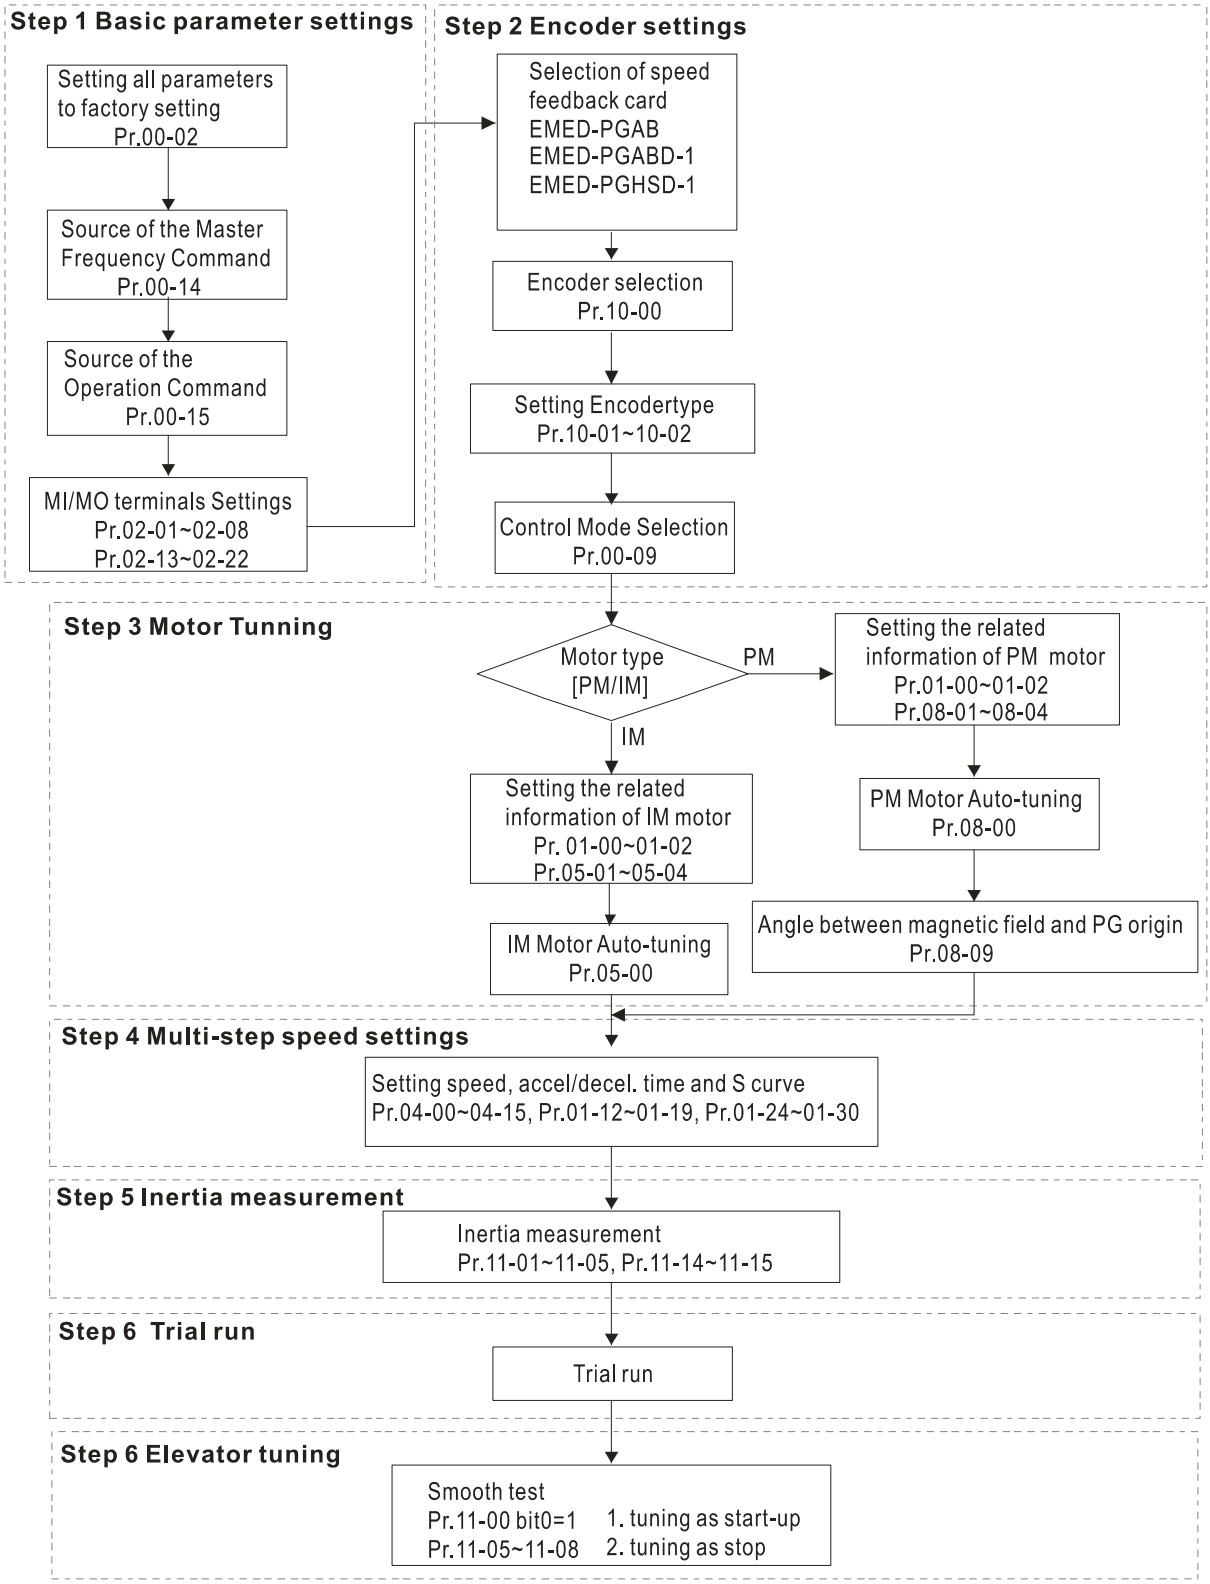






10 Auto-tuning Operations

■ Flow Chart



■ Explanations for the Auto-tuning Steps

Step1

Basic Parameters Settings

- Make sure that Pr.00-00 (identity code of the AC motor drive) corresponds with the nameplate indicated on the AC motor drive.
- Make sure that all parameters are reset to factory setting (Pr.00-02 is set to 9 or 10).

Pr00-02 Parameter Reset	0: No function 1: Read only 8: Keypad lock 9: All parameters are reset to factory settings (base frequency = 50Hz） 10: All parameters are reset to factory settings (base frequency = 60Hz)

- Source of the Master Frequency Command: It is user-defined. (Pr.00-14)

Pr00-14 Source of the Master Frequency Command	1: RS-485 serial communication or digital keypad (KPC-CC01) 2: External analog input (Pr. 03-00) 3: Digital terminals input (Pr04-00 ~ Pr.04-15)

- Source of the Operation Command: It is user-defined. (Pr.00-15)

Pr00-15 Source of the operation frequency	1: External terminals 2: RS-485 serial communication or digital keypad (KPC-CC01)

- MI/MO External Terminal Settings:

Refer to Pr.02-01~Pr02-08 for setting of the external input terminals MI1~MI8.

NOTE: The factory setting of Pr.02-08 is 40 (Enable drive function).

Disable this function, if you don't need to use it.

Settings of Pr02-01 to Prp02-08	0: No function 1: multi-step speed command 1 2: multi-step speed command 2 3: multi-step speed command 3 4: multi-step speed command 4 5: Reset 6: JOG command 7: Acceleration/ Deceleration Speed inhibit 8: the 1st, 2nd acceleration/deceleration time selection 9: the 3rd, 4th acceleration/deceleration time selection 10: EF input (07-28) 11: Reserved 12: Stop Output 13: Reserved 14: Reserved 15: Operation speed command form AUI1 16: Reserved 17: operation speed command form AUI2 18: Emergency stop (Pr07-28) 19~23: Reserved 24: FWD JOG command

	25: REV JOG command 26: Reserved 27: ASR1/ASR2 selection 28: Emergency stop (EF1) (Motor coasts to stop) 29-30: Reserved 31: High torque bias (by Pr.07-21) 32: Middle torque bias (by Pr.07-22) 33: Low torque bias (by Pr.07-23) 34-37: Reserved 38: Disable write EEPROM function 39: Torque command direction 40: Enable drive function 41: Detection for magnetic contactor 42: Mechanical brake 43: EPS function

Refer to Pr02-15 and Pr02-16 for the settings of MO1~MO8

Pr02-15~ Pr02-16	0: No function 1: Operation indication 2: Operation speed attained 3: Desired frequency attained 1 (Pr.02-25) 4: Desired frequency attained 2 (Pr.02-27) 5: Zero speed (frequency command) 6: Zero speed with stop (frequency command) 7: Over torque (OT1) (Pr.06-05~06-07) 8: Over torque (OT2) (Pr.06-08~06-10) 9: Drive ready 10: User-defined Low-voltage Detection (LV) 11: Malfunction indication 12: Mechanical brake release (Pr.02-29, Pr.02-30) 13: Overheat (Pr.06-14) 14: Brake chopper signal 15: Motor-controlled magnetic contactor output 16: Slip error (oSL) 17: Malfunction indication 18: Reserved 19: Brake chopper output error 20: Warning output 21: Over voltage warning 22: Over-current stall prevention warning 23: Over-voltage stall prevention warning 24: Operation mode indication (Pr.00-15≠0) 25: Forward command 26: Reverse command 27: Output when current >= Pr.02-33 28: Output when current < Pr.02-33 29: Output when frequency >= Pr.02-34 30: Output when frequency < Pr.02-34 31-32: Reserved 33: Zero speed (actual output frequency) 34: Zero speed with Stop (actual output frequency) 35: Error output selection 1 (Pr.06-22) 36: Error output selection 2 (Pr.06-23) 37: Error output selection 3 (Pr.06-24) 38: Error output selection 4 (Pr.06-25) 39: Reserved 40: Speed attained (including zero speed) 41: Reserved 42: SO logic A output

Step2

Encoder Settings

- Selection of speed feedback cards
  - Refer to CH07 Speed Feedback Card Selection. Delta provides 2 kinds of PG card for user to choose, including EMED-PGABD-1 and EMED-PGHSD-1.

Pr10-00 Type of PG signal	0: No function 1: ABZ 2: ABZ+Hall 3: SIN/COS + Sinusoidal 4: SIN/COS + Endat 5: SIN/COS 6: SIN/COS + Hiperface

- Encoder settings: Pr.10-01~Pr.10-02

Detection for the magnetic pole position of motor

The detection method will be different by the setting of Pr.10-00 PG Signal Type.

The detection methods: (refer to Pr.10-00)

- Setting 1 or 5: The AC motor drive will output short circuit to detect the position of the magnetic pole. At this moment, the motor will generate a little noise.
- Setting 2: The AC motor drive will detect the position of the magnetic pole by the UVW signal of PG.
- Setting 3: The AC motor drive will detect the position of the magnetic pole by the sine signal of PG.
- Setting 4: The AC motor drive will detect the position of the magnetic pole by the communication signal of PG.

Pr10-01 Encoder Pulse	1~25000

Type of Encoder Input Setting. The setting of this parameter is normally 1, if the motor doesn't run at setting 1, change to setting 2.

Pr10-02 Type of Encoder Input Setting	0: No fucntion 1: Phase A leads in a forward run command and phase B leads in a reverse run command 2: Phase B leads in a forward run command and phase A leads in a reverse run command 3: Phase A is a pulse input and phase B is a direction input. (low input=reverse direction, high input=forward direction) 4: Phase A is a pulse input and phase B is a direction input. (low input=forward direction, high input=reverse direction) 5: Single-phase input

Step 3

Motor tuning

- Setting the parameters according to the motor type (PM or IM)
- Motor Auto-tuning: When the Source of the Operation Command is set to digital keypad (Pr.00-15=2, refer to step 1)
- Control method: Please set Pr.00-09 to 8.

Pr00-09 Control Method	0: V/f Control 1: V/f Control + Encoder (VFPG) 2: Sensorless vector control (SVC) 3: FOC vector control + Encoder (FOCPG) 4: Torque control + Encoder (TQCPG) 8: FOC PM control (FOCPM)

- NOTE: Setting parameter by the motor type (PM or IM).
- Inputting the nameplate information on the motor into Pr.01-00~01-02

Pr01-00 Maximum Output Frequency	10.00~400.00Hz

Pr01-01 1st Output Frequency Setting 1 (base frequency/ motor rated frequency)	0.00~400.00Hz

Pr.01-02 1st Output Voltage Setting 1 (base voltage/ motor rated voltage)	230V models: 0.0V~255.0V 460V models: 0.0V~510.0V

【IM (Induction Motor】

- Motor Auto-tuning: When the Source of the Operation Command is set to digital keypad (Pr.00-15=2, refer to step 1) and setting Pr.05-00=2
-

Pr05-00 Motor Auto Tuning	0: No function 1: Rolling test (Rs, Rr, Lm, Lx, no-load current) , (Motor runs) 2: Static Test (Motor doesn't run)

NOTE 1: It doesn't need to release the brake in this auto tuning operation. Please make sure that the electromagnetic valve is ON when it is used between the AC motor drive and motor. When Pr.05-00 is set to 2, no-load current of motor must be entered into Pr.05-05. The warning message "Auto tuning" will be displayed on the digital keypad during tuning until it is finished. Then, the measure result will be saved into Pr.05-06~Pr.05-09.

NOTE 2: It needs to finish motor auto tuning before measuring the angle between magnetic pole and PG origin.

Pr05-01 Full-load Current of Motor	（40~120%）*00-01 Amps

Pr05-02 Rated Power of Motor	0.00~655.35kW

Pr05-03 Rated Speed of Motor(rpm)	0~65535

Pr05-04 Number of Motor Poles	2~9

【Permanent Magnet Motor】

- Motor Auto-tuning: When the Source of the Operation Command is set to digital keypad (Pr.00-15=2, refer to step 1) and setting Pr.08-00=2

Pr08-00 Motor Auto Tuning	0: No function 1: Only for the unloaded motor, auto measure the Angle between magnetic pole and PG origin (08-09) 2: For PM parameters 3: Auto measure the Angle between magnetic pole and PG origin (08-09)

NOTE 1: It doesn't need to release the brake in this auto tuning operation. Please make sure that the electromagnetic valve is ON when it is used between the AC motor drive and motor. The warning message "Auto tuning" will be displayed on the digital keypad during tuning until it is finished. Then, the measure result will be saved into Pr.08-05 and Pr.08-07. (Pr.08-05 is Rs of Motor and Pr.08-07 is Lq of Motor)

NOTE 2: It is recommended to set Pr.08-00 to 1 (unloaded motor) for the most accurate calculation. If it needs to execute this function with loaded motor, please balance the carriage before execution. When Pr.08-00=1, please note:

- When executing the function of auto measure the Angle between magnetic pole and PG origin, it is recommended to stop the carriage car at the middle level.
- Make sure that the electromagnetic valve and mechanical brake are OFF before executing this function.
- When Pr.08-00=1, please execute this function with unloaded motor to get the most accurate result. If it needs to execute this function with loaded motor, please balance the carriage before execution. Make sure the balance by releasing the brake manually before running. This balance will affect the accuracy and the accuracy will influence the power efficiency in driving the motor.

■

NOTE 3: If it doesn't allow balancing carriage in the measured environment, it can set Pr.08-00 to 3 for executing this function. It will have a difference of 15~30^{o} by the different encoder type.

- When Pr.08-00 is set to 3, the driver will execute the function by the setting of Pr.10-00. The difference between Pr.08-00=3 and Pr.08-00=1 is it doesn't need to put the balanced carriage when Pr.08-00=3. Besides, the operation status of the motor will be as shown in the above table (Pr.10-00=1, 2, 3 and 5, the motor will run. Pr.10-00=4 and 6, the motor won't run)
- When Pr.08-00=3, please make sure if the setting of Pr.10-02 is correct. The incorrect setting will result in the wrong position of the magnetic pole and make the wrong angle between magnetic pole and PG origin.

■

NOTE 4: The warning message "Auto tuning" will be displayed on the digital keypad during tuning until it is finished. Then, the measure result will be saved into Pr.08-09.

NOTE 5: If the warning message "Auto Tuning Err" displayed on the digital keypad during tuning due to abnormal drive or human factor, please check if the wiring is correct. When the warning message "PG Fbk Error" displayed on the digital keypad, please change the setting of Pr.10-02 (for example: if it was set to 1, please change it to 2). When the warning message "PG Fbk Loss" is displayed on the digital keypad, please check the feedback of Z-phase pulse.

Pr.08-01 Full-load Current of Motor	(40~120%)*00-01 Amps

Pr.08-02 Rated power of Motor	0.00~655.35 kW

Pr.08-03 Rated speed of Motor (rpm)	0~65535

Pr.08-04 Number of Motor Poles	2~96

- Measure the angle between magnetic pole and PG origin

It can execute “RUN” by keypad or digital terminals:

1. Using digital keypad: setting Pr.08-00 to 1 and press “RUN” to execute “auto measure the angle between magnetic pole and PG origin”. Please note that if the electromagnetic valve and brake are not controlled by the AC motor drive, please release it by manual.

2. Using external terminals: setting Pr.00-14=3 (frequency source) and Pr.00-15=1 (operation source). Please use “inspection” function to execute “auto measure the angle between magnetic pole and PG origin”.

For the IM, it doesn’t need to detect the position of the magnetic pole, this function (auto measure the Angle between magnetic pole and PG origin) doesn’t have to be executed.

Measure the angle between magnetic pole and PG origin: Pr.08-00=1 or 3

Pr.08-00 Motor Auto tuning	0: No function 1: Only for the unloaded motor, auto measure the Angle between magnetic pole and PG origin (08-09) 2: For PM parameters 3: Auto measure the Angle between magnetic pole and PG origin (08-09)

NOTE: The function of “auto measure the angle between magnetic pole and Pg origin” only can be enabled after finishing motor auto-tuning.

Step 4

Multi-Step Speed setting or Analog setting

(Do not wire the two settings at the same time)

A. Multi-step speed settings

- Confirm the total speed steps (high speed, middle speed, low speed, creep, inspection and level auto-learning)
- Make sure that the setting of step speeds and the action of the corresponding terminals of multi-function input commands are correct.
- Setting multi-step speeds in Pr.04-00 to Pr.04-15

■

Settings of Pr.04-00 to Pr.04-15	Zero Step Speed Frequency	0.00~400.00Hz
	1st Step Speed Frequency	0.00~400.00Hz
	2nd Step Speed Frequency	0.00~400.00Hz
	3rd Step Speed Frequency	0.00~400.00Hz
	4th Step Speed Frequency	0.00~400.00Hz
	5th Step Speed Frequency	0.00~400.00Hz
	6th Step Speed Frequency	0.00~400.00Hz
	7th Step Speed Frequency	0.00~400.00Hz
	8th Step Speed Frequency	0.00~400.00Hz
	9th Step Speed Frequency	0.00~400.00Hz
	10th Step Speed Frequency	0.00~400.00Hz
	11th Step Speed Frequency	0.00~400.00Hz
	12th Step Speed Frequency	0.00~400.00Hz
	13th Step Speed Frequency	0.00~400.00Hz
	14th Step Speed Frequency	0.00~400.00Hz
	15th Step Speed Frequency	0.00~400.00Hz

■

NOTE: It is recommended to set the max. operating frequency to the half of max. operating frequency before confirming the setting of each step speed and the action of the corresponding terminals of multi-function input commands.

- Setting the acceleration/deceleration with Pr.01-23 and the setting 08 (the 1st, 2nd acceleration/deceleration time selection) and 09 (the 3rd, 4th acceleration/deceleration time selection) of multi-function input command Pr.02-01~02-08.
- Settings of acceleration/deceleration time: Pr.01-12~Pr.01-19

Settings of Pr.01-12 to Pr.01-19	Accel Time 1	0.00~600.00 sec
	Decel Time 1	0.00~600.00 sec
	Accel Time 2	0.00~600.00 sec
	Decel Time 2	0.00~600.00 sec
	Accel Time 3	0.00~600.00 sec
	Decel Time 3	0.00~600.00 sec
	Accel Time 4	0.00~600.00 sec
	Decel Time 4	0.00~600.00 sec

■

NOTE: it is recommended to set the Pr.01-31 (deceleration time) to the small value in the trial run and execute smooth test after all the actions are correct.

■ Settings of S curve: Pr.01-24~Pr.01-30

Settings of Pr.01-24 to Pr.01-30	S-curve for Acceleration Departure Time S1	0.00~25.00 sec
	S-curve for Acceleration Arrival Time S2	0.00~25.00 sec
	S-curve for Deceleration Departure Time S3	0.00~25.00 sec
	S-curve for Deceleration Arrival Time S4	0.00~25.00 sec
	Mode Selection when Frequency < Fmin	0: Output waiting 1: Zero-speed operation 2: Fmin (4th output frequency setting)
	Switch Frequency for S3/S4 Changes to S5	0.00~400.00Hz
	S-curve for Deceleration Arrival Time S5	0.00~25.00 sec

NOTE: it is recommended to set the S curve time to 0 in trial run and execute smooth test after all the actions are correct.

B. Analog setting

1. Set Pr00-14=2, frequency command is assigned by the external analog signal.
2. Set Pr00-15 =1, operating command is assigned by the external terminals.
3. In order to work with the control terminal, set up Pr03-23 or Pr03-24 in accordance with the output mode of the controller
4. Set up Pr03-03, PR03-05 or Pr03-06 to work with the connecting port. Set F to display 0Hz when the motor drive is going to stop.

Step5

Inerrtia

Pr.11-05 Inertial Ratio	1~300%

Step 6

Trial run

This step is used to trial run after finishing the settings of Step 1 to Step 5 to check if it runs normally after executing the inspection with the loaded motor. At the same time, please also check if the operations of multi-function output terminals is normal, such as the action of the brake release and electromagnetic valve correspond to the host controller.

It needs to check the switch between each step speed, current value, the noise in the carriage and noise source during operation.

Step 7

Elevator tuning

1. Setting Pr. 11-00 to bit 0=1

Pr.11-00 System control	Bit 0=0: disable Bit 0=1: ASR Auto tuning, PDFF enable Bit 7=1: When position control is enabled, it doesn't need to set Pr.07-02 (DC Brake Current Level) Bit 15=0: when power is applied, it will detect the position of magnetic pole again Bit 15=1: when power is applied, it will start from the magnetic pole position of previous power failure

NOTE: bit 15=0, it will detect the position of magnetic pole when the power is applied. (it will detect every time when the power is applied.)
Bit 15=1: when power is applied, it will start from the magnetic pole position of previous power failure. Please make sure that the motor is not manually rotated during power off. If the motor has been rotated during power off, please set Pr.08-10=1 for magnetic pole re-orientation.

2. Smooth test for general operation
   - Adjust the setting of Pr.11-05

Pr.11-05 Inertial Ratio	1~300%

   - Adjust the settings of Pr.11-06 to Pr.11-08

Settings of Pr.11-06 to Pr.11-08	Zero-speed Bandwidth	0~40Hz
	Low-speed Bandwidth	0~40Hz
	High-speed Bandwidth	0~40Hz

3. Start-up adjustment (only for PM)
   - Control by the zero-speed position

Setting Pr.11-00, 10-19, 10-22, 10-23, 02-29 and 10-24

Pr.11-00 System control	Bit 0=0: disable Bit 0=1: ASR Auto tuning, PDFF enable Bit 7=1: When position control is enabled, it doesn't need to set Pr.07-02 (DC Brake Current Level) Bit 15=0: when power is applied, it will detect the position of magnetic pole again Bit 15=1: when power is applied, it will start from the magnetic pole position of previous power failure
Pr.10-19 Zero Speed Gain (P)	0~655.00%

NOTE: refer to the explanations in Pr.02-32

Pr.10-22 Operation Time of Zero Speed	0.000~65.535sec

Pr.10-23 Filter Time of Zero Speed	0.000~65.535sec

Pr.10-24 Time for Zero Speed Execution	0: after the brake release set in Pr.02-29 1: after the brake signal input (Pr.02-01~02-08 is set to 42)

Pr.02-29 Brake Release Delay Time when Elevator Starts	0.000~65.000 Sec

NOTE: When Pr.10-24=0, the zero speed control needs to be used with Pr.02-29. (refer to the explanations in Pr.02-32)

- Function of the preload input

Connect the signal of the preload signal to the external terminal of the AC motor drive (AUI1) and setting Pr.03-00=11, 07-19=1, 03-03, 03-06 and 03-09.

Pr.03-00 Analog Input 1 (AUI1)	0: No function 1: Frequency command (torque limit under TQR control mode) 2: Torque command (torque limit under speed mode) 3: Torque compensation command 4-5: Reserved 6: P.T.C. thermistor input value 7: Positive torque limit 8: Negative torque limit 9: Regenerative torque limit 10: Positive/negative torque limit

Pr.07-19 Source of Torque Offset	0: Disable 1: Analog input (Pr.03-00) 2: Torque offset setting (Pr.07-20) 3: Control by external terminal (by Pr.07-21 to Pr.07-23)

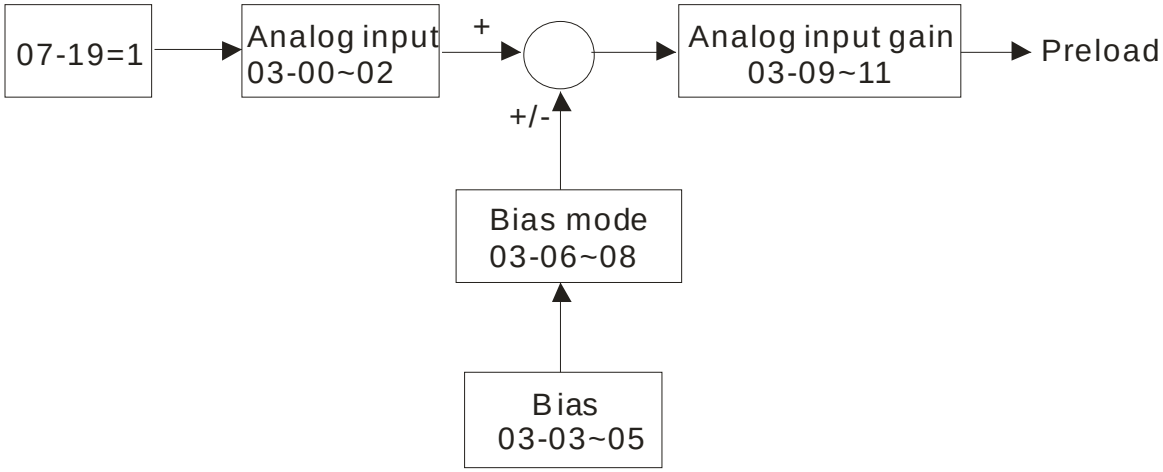
Pr.03-03 Analog Input Bias 1 (AUI1)	-100.0~100.0%

Pr.03-06 Positive/negative Bias Mode (AUI1)	0: Zero bias 1: Lower than bias=bias 2: Greater than bias=bias 3: The absolute value of the bias voltage while serving as the center 4: Serve bias as the center

Pr.03-09 Analog Input Gain 1 (AUI1)	-500.0~500.0%

NOTE: Pr.03-03, 03-06 and 03-09 are used to adjust the analog input signal.

07-19: Source of torque offset
03-00~02: Analog input selections (AUI1/ACI/AUI2)
03-03~05: Analog input bias (AUI1/ACI/AUI2)
03-06~08: AUI1/ACI/AUI2 bias mode



4. Setting of drive stop

Adjusting Pr.01-29, Pr.01-30, Pr.01-31 and Pr.11-06

Pr.01-29 Switch Frequency for S3/S4 Changes to S5	0.00~400.00Hz

Pr.01-30 S-curve for Deceleration Arrival Time S5	0.00~25.00 sec

Pr.11-06 Zero-speed Bandwidth	0~40Hz

Pr.01-31 Deceleration Time	0.00~600.00 sec

11 Summary of Parameter Settings

This chapter provides summary of parameter settings for user to gather the parameter setting ranges, factory settings and set parameters. The parameters can be set, changed and reset by the digital keypad.

NOTE

1） ✓: the parameter can be set during operation

2） For more detail on parameters, please refer to Ch12 Description of Parameter Settings.

00 Drive Parameters

NOTE IM: Induction Motor; PM: Permanent Magnet Motor

Pr.	Explanation	Setting Range	Factory Setting	VF	VFPG	SVC	FOCPG	TQCPG	FOCPM
00-00	Identity Code of the AC Motor Drive	108：220V，3HP (single phase) 110：220V，5HP (Single phase) 8：230V，3HP 10：230V，5HP 11：460 V，5HP (4.0kW) 12：230V，7.5HP 13：460 V，7.5HP 14：230V, 10HP 15：460V, 10HP 16：230V, 15HP 17：460V, 15HP 18：230V, 20HP 19：460V, 20HP 20：230V, 25HP 21：460V, 25HP 22：230V, 30HP 23：460V, 30HP 24：230V, 40HP 25：460V, 40HP 26：230V, 50HP 27：460V, 50HP 29：460V, 60HP 31：460V, 75HP 33：460V, 100HP	Read Onlty	○	○	○	○	○	○
